Predictions

trends and the future of living

Looking to future values of Millennials:

- most educated generation in North American history
 - trends toward the sharing economy DIY ethos
 - 35% of millennials are entrepreneurs to supplement income
 - less babies, less marriage
 - change careers an average of 7 times in their lifetime
 - value flexibility, self-expression, and success over profit
-

Future of Real Estate:

- growing urban rental market
 - retirees are downsizing Top priorities are location, short commutes, and character of house
 - are highly mobile (37% feel likely to move within next 2 years)
 - 69% believe that regular office attendance is unnecessary, and
 - have a more live/work lifestyle
-

**How can we answer
the needs of the
future market?**

How can we answer the needs of the future market?

An **adaptable, net-zero** unit that elevates the experience and knowledge of its resident by merging **smart technology** with **passive** and **active** sustainability measures. ●

Adaptable: responsive and flexible in terms of location, context, audience, and size.

Net-zero: is a building with zero net energy consumption and near-zero carbon emissions annually. The building may still be on the grid, however it replenishes as much energy as it uses.

Smart technology: innovative and interactive technology that senses and responds to the needs of the user.

Passive: relies on the built-in environment of the housing unit (windows and walls) to collect, store and distribute solar energy into the form of heat for winter months and reject the solar heat in the summer.

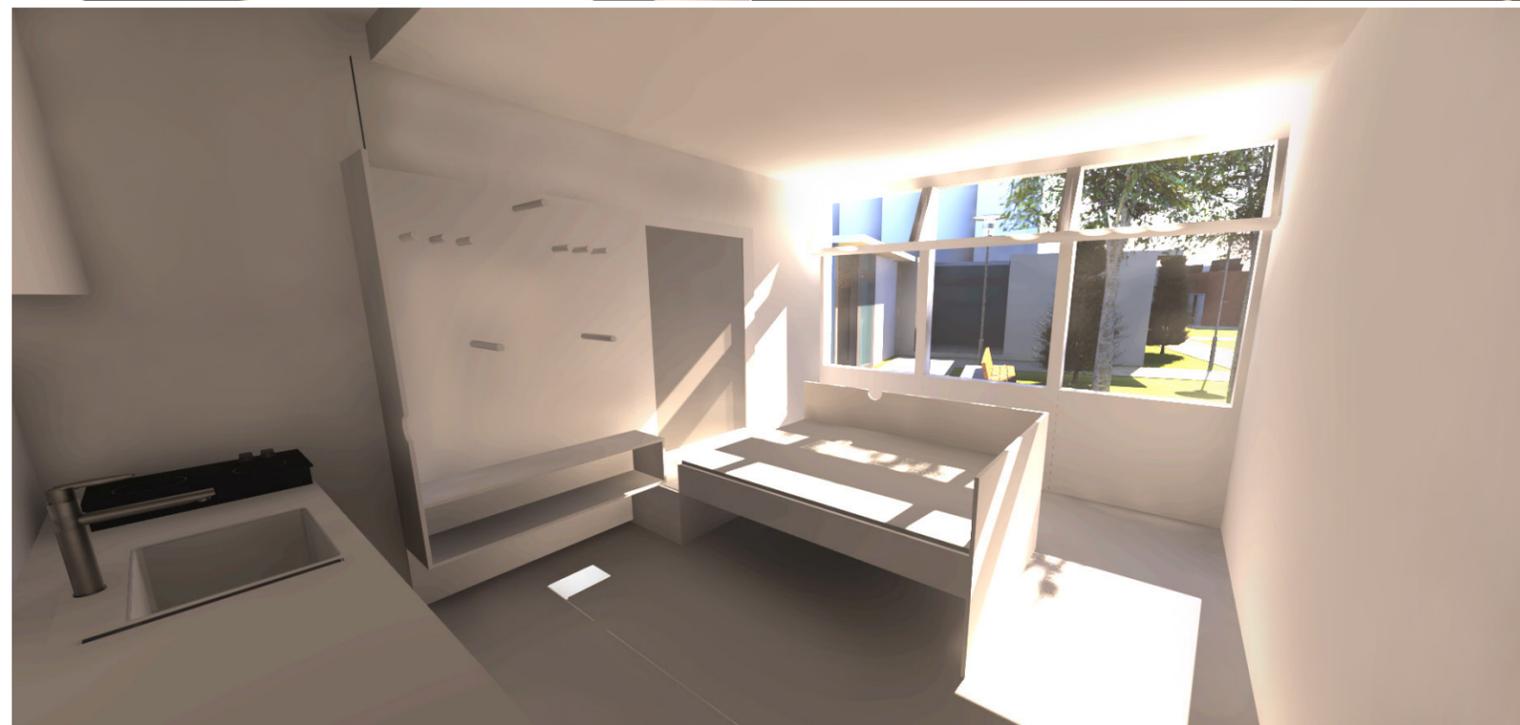

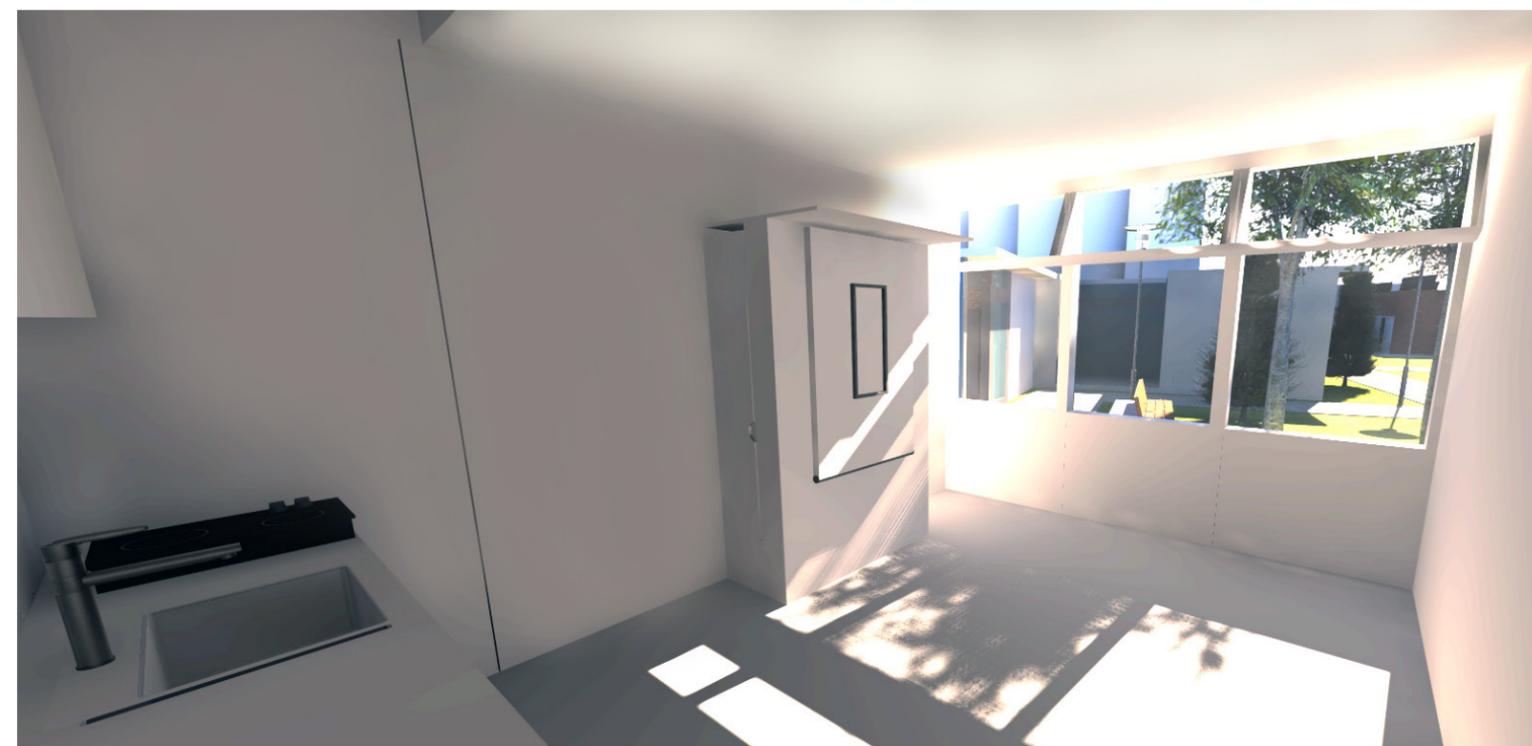

Active: relies on built mechanical or technical devices to collect solar energy and convert it into heat or electricity.

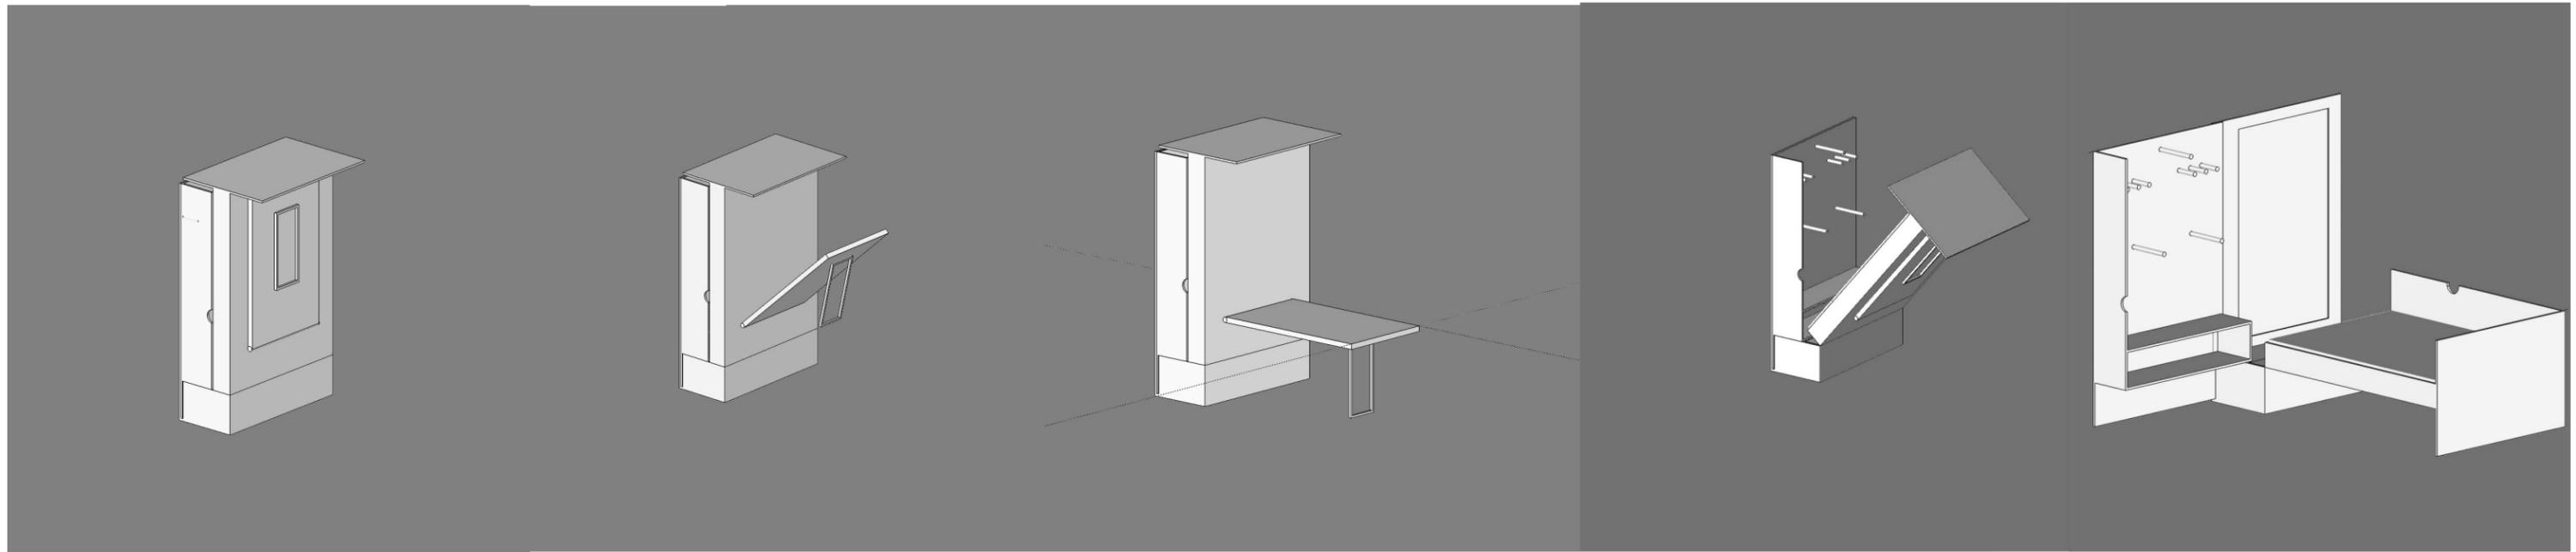

Sustainable: development that meets current social, environmental, and economic needs without compromising the ability of future generations to meet their own needs.

Resilience

strong, healthy construction

Flexible Floor Plans

Parasitic

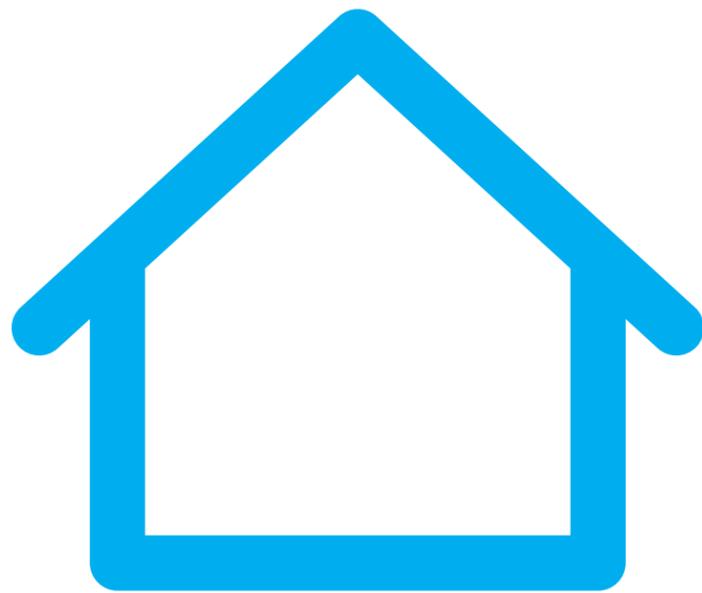

attaches to existing
infrastructure systems
for access to utilities.

Symbiotic

as opposed to parasitic:
buildings that hold a
mutually beneficial
relationship.

Electricity

Average Canadian household

106GJ

600 sf home

47GJ

Habi home
can generate

31GJ

Passive Houses use:

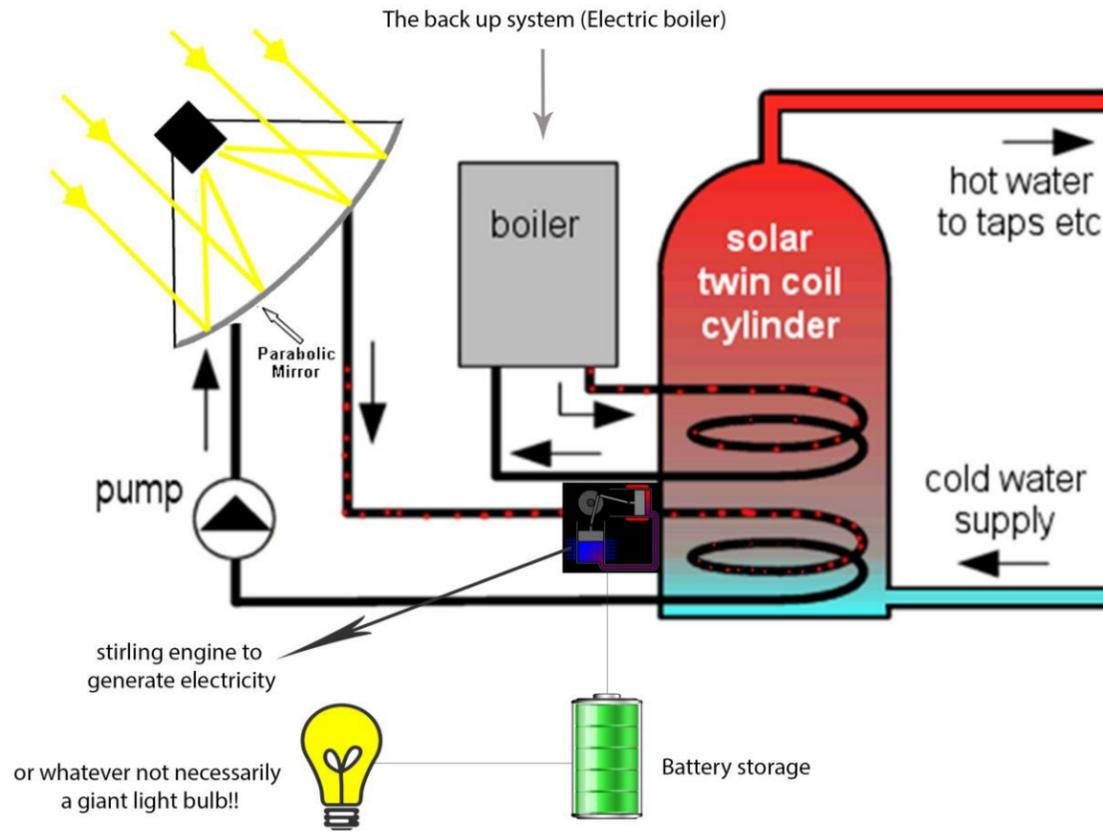

4755 BTUs/sqft per year

Habi can generate:

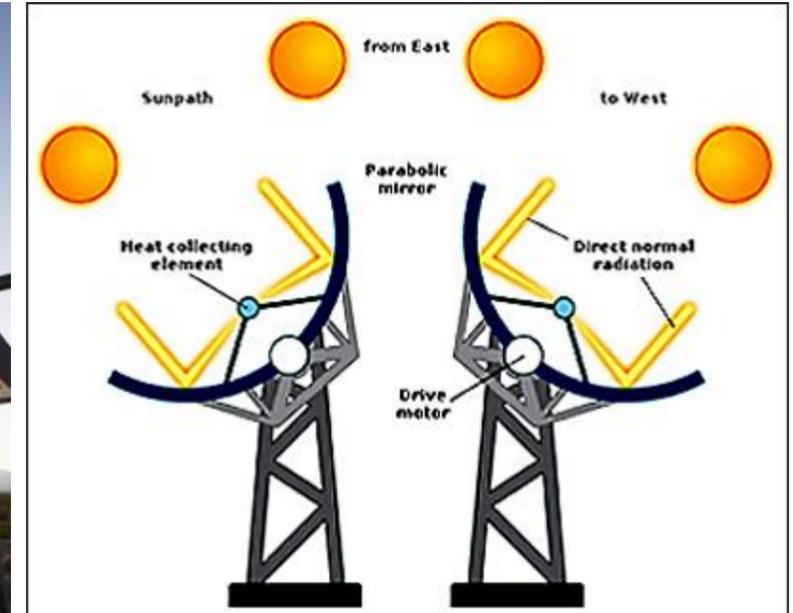

single unit: 4,015,000 BTUs/year

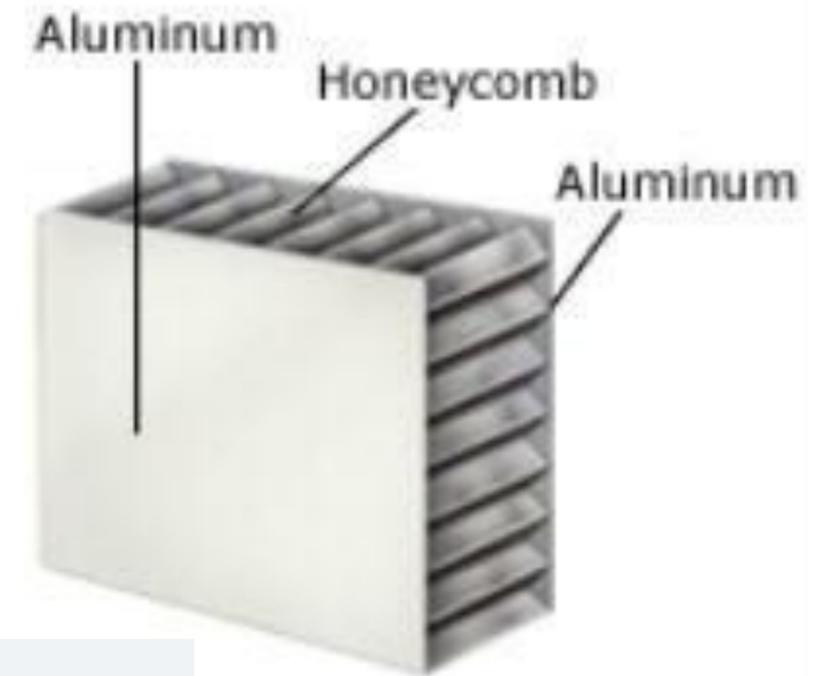

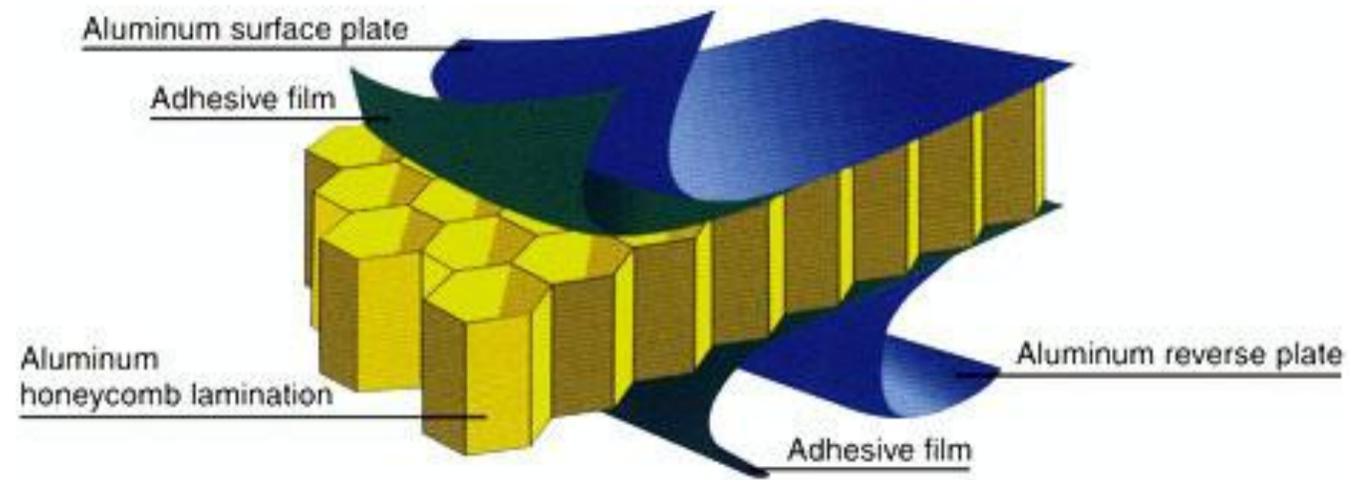

double unit: 8,030,000 BTUs/year

This is our system!!

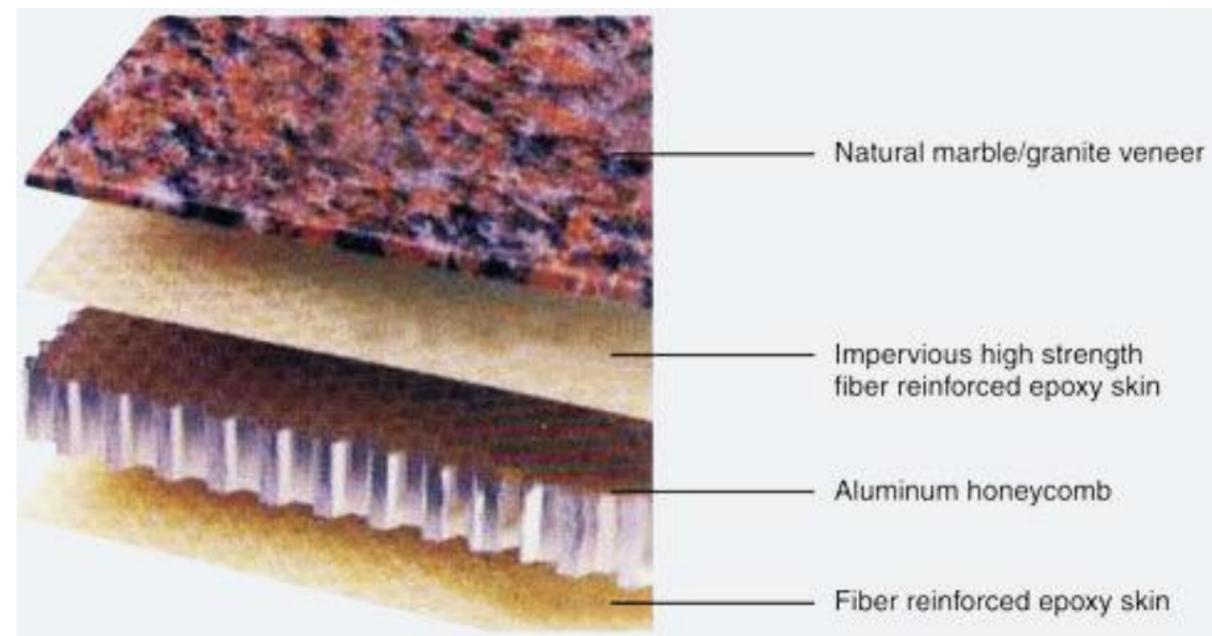

The Stirling Energy Systems dish in Albuquerque, NM generates electricity by focusing the sun's rays onto a receiver, which transmits the heat energy to a Stirling engine. The Department of Energy's SunShot Initiative aims to cut the cost of utility scale solar installations to make way for the broad deployment of similar projects.
