1 e-copy – The Regional Municipality of York

## Executive Summary

Golder Associates Ltd. ("Golder") was retained by HDR Corporation ("HDR"), on behalf of The Regional Municipality of York (the "Region"), to carry out multiple consulting services, which included this Contamination Overview Study ("COS") of the Kennedy Road Right-of-Way ("ROW") between Steeles Avenue and Major Mackenzie Drive in Markham, Ontario.

The Regional Municipality of York has retained HDR to carry out multiple consulting services for a Municipal Class Environmental Assessment (EA) Study for improvements to Kennedy Road.

The COS consisted of a broad level assessment of actual and potential sources of contamination within the study area based on a review of readily available information regarding current and former land uses and a drive-by visual site reconnaissance. Based on this information, Areas of Potential Environmental Concern ("APECs") were identified and recommendations provided with regards to the need for further investigation. An APEC consists of an area with existing or potential for subsurface contamination based on current and historical land usage.

Contamination is defined as subsurface soil, groundwater and/or sediment with the potential to exceed established Ontario Ministry of the Environment and Climate Change ("MOECC") generic site condition standards, as set out in "Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act" (dated April 2011).

For the purpose of this COS, the study area included the existing Kennedy Road ROW from Steeles Avenue to Major Mackenzie Drive, and the adjacent properties within 250 metres from both sides of the ROW. For the purposes of describing relative locations in this report, the following sections along Kennedy Road were defined:

- Section 1 – The section of Kennedy Road between Steeles Avenue and 14<sup>th</sup> Avenue (see Figure 2A);
- Section 2 – The section of Kennedy Road between 14<sup>th</sup> Avenue and Highway 7 (see Figure 2B);
- Section 3 – The section of Kennedy Road between Highway 7 and 16<sup>th</sup> Avenue (see Figure 2C); and,
- Section 4 – The section of Kennedy Road between 16<sup>th</sup> Avenue and Major Mackenzie Drive (see Figure 2D).

The approximate total length of the section of Kennedy Road included in this study is 9 km as shown on the Key Plan, Figure 1. The locations of the above sections along Kennedy Road are shown on Figure 2.

Based on the findings of the COS conducted on the study area, several APECs were identified as having the potential for subsurface impacts in the study area. The findings are as follows:

- Seven (7) gas stations and four (4) dry cleaners were observed within the study area;
- Several properties within the study area were identified as either having had, or currently having, private and retail fuel tanks on site. The condition and operation period of these tanks is unknown;
- Nine (9) autobody repair and service shops were identified within the study area;
- Multiple environmental spills including diesel fuel, gasoline, transformer oil and fuel oil were listed on or adjacent to the Kennedy Road ROW, some of which were associated with retail gas stations. The spills

## CONTAMINATION OVERVIEW STUDY, KENNEDY ROAD RIGHT-OF-WAY, MARKHAM, ONTARIO

ranged in size from 38 L to 1,800 L and environmental impacts were unknown or not confirmed in many cases.

- In addition to the above, it is anticipated that fill material and salt-related impacts as a result of roadway de-icing activities may be present in the study area. The quality and source of this suspected fill material and any salt-related soil and groundwater impacts are unknown. An assessment of the quality of the fill and subsurface soils is recommended as part of the proposed construction activities prior to the reuse of any excavated and/or excess material. Similarly, the quality of water generated during any construction dewatering activities should be assessed prior to being discharged to the environment.

Golder understands that the details and design of the planned improvements to Kennedy Road have not been fully determined. Based on this and the above findings, the following preliminary recommendations are provided:

- Conduct a subsurface investigation in the vicinity of each APEC identified as having a moderate risk in order to assess the potential presence of subsurface contamination and the potential for impacts, if any, to affect the proposed ROW improvements. Depending on the depth of excavation required for the proposed ROW improvement, the investigation may include the characterization of both soil and groundwater quality; and
- Incorporate requirements in the construction specification regarding the environmental characterization and management of excess soil.

Once more details are available regarding the proposed ROW improvements, more detailed recommendations can be provided. The subsurface investigation may consist of the drilling of boreholes, installation of groundwater monitoring wells and the collection and analysis of soil and groundwater samples. The number and type of tests would be dependent upon the identified APEC, its proximity to the ROW and the proposed improvements. Consideration should be given to conducting the environmental investigation program in conjunction with the proposed future geotechnical investigation program.

### 1.0 INTRODUCTION

Golder Associates Ltd. (“Golder”) was retained by HDR Corporation (“HDR”), on behalf of The Regional Municipality of York (the “Region”), to carry out a multiple consulting services, which included this Contamination Overview Study (“COS”) of the Kennedy Road Right-of-Way (“ROW”) between Steeles Avenue and Major Mackenzie Drive in Markham, Ontario.

The Regional Municipality of York has retained HDR to carry out multiple consulting services for a Municipal Class Environmental Assessment (EA) Study for improvements to Kennedy Road.

The COS consisted of a broad level assessment of actual and potential sources of contamination within the study area based on a review of readily available information regarding current and former land uses and a drive-by visual site reconnaissance. Based on this information, Areas of Potential Environmental Concern (“APECs”) were identified and recommendations provided with regards to the need for further investigation. An APEC consists of an area with existing or potential for subsurface contamination based on current and historical land usage. Contamination is defined as subsurface soil, groundwater and/or sediment with the potential to exceed established Ontario Ministry of the Environment and Climate Change (“MOECC”) generic site condition standards, as set out in “Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act” (dated April 2011).

For the purpose of this COS, the study area included the existing Kennedy Road ROW from Steeles Avenue to Major Mackenzie Drive, and the adjacent properties within 250 metres from both sides of the ROW. For the purposes of describing relative locations in this report, the following sections along Kennedy Road were defined:

- Section 1 – The section of Kennedy Road between Steeles Avenue and 14<sup>th</sup> Avenue (see Figure 2A);
- Section 2 – The section of Kennedy Road between 14<sup>th</sup> Avenue and Highway 7 (see Figure 2B);
- Section 3 – The section of Kennedy Road between Highway 7 and 16<sup>th</sup> Avenue (see Figure 2C); and,
- Section 4 – The section of Kennedy Road between 16<sup>th</sup> Avenue and Major Mackenzie Drive (see Figure 2D).

The approximate total length of the section of Kennedy Road included in this study is 9 km as shown on the Key Plan, Figure 1. The locations of the sections along Kennedy Road are shown in Figure 2.

#### 1.1 Scope of Work

The COS scope of work included the following:

- Review of background information for the study area including:
  - Historic records and database information from an Ecolog ERIS report;
  - Physiographic, Geologic and Hydrogeologic maps and reports; and,
  - Aerial photographs.
- Review of Municipal and Regional data (where available);
- A “drive-by” and/or walkthrough reconnaissance of the study area; and

- Preparation of this COS report summarizing the investigation findings.

Details of the information reviewed, study area reconnaissance observations and APECs are provided in Sections 3, 4 and 5 of this report. Key findings and recommendations are given in Section 6. Section 7 discusses study limitations and appropriate uses of this report.

The scope of this COS assessment is sufficient only to identify potential environmental issues within the study area which are obvious from a preliminary visual examination of surface features or from reviewed sources of information. No soil, water, liquid, gas, product or chemical sampling and testing on or in the vicinity of the study area was conducted as part of this assessment. This assessment included a cursory overview, via a “drive-by” and/or walkthrough reconnaissance of the study area, and does not constitute a complete assessment of these lands. Private properties located within the study area were assessed from publicly accessible lands.

## 2.0 STUDY AREA DESCRIPTION

### *Study Area Limits and General Land Usage*

The study area included the Kennedy Road ROW and adjacent lands within 250 m from either side of the ROW between Steeles Avenue and Major Mackenzie Drive, as illustrated on Figures 2A, 2B, 2C and 2D.

For the purposes of the COS study, the following four sections along Kennedy Road, from south to north, were defined:

- Section 1 – The section of Kennedy Road between Steeles Avenue and 14<sup>th</sup> Avenue (see Figure 2A). Lands within Section 1 of the study area consisted of commercial and residential properties;
- Section 2 – The section of Kennedy Road between 14<sup>th</sup> Avenue and Highway 7 (see Figure 2B). Lands within Section 2 of the study area consisted of a mix of commercial and residential properties with light industrial uses in the southern portion of the section;
- Section 3 – The section of Kennedy Road between Highway 7 and 16<sup>th</sup> Avenue (see Figure 2C). Lands within Section 3 of the study area consisted of primarily residential and commercial uses with green spaces; and
- Section 4 – The section of Kennedy Road between 16<sup>th</sup> Avenue and Major Mackenzie Drive (see Figure 2D). Lands within Section 4 of the study area generally consisted of commercial and residential properties with some green spaces and land undergoing development.

For the purpose of describing relative locations in this COS report, Kennedy Road is assumed to run in a south-north direction.

### *Topography and Drainage*

Topography varies along Kennedy Road ROW. In general, elevations decrease towards the south, with localised undulations. Section 1 remains relatively level, ranging between 201 and 204m, with a slight decline south towards Steeles Avenue, which lies at 194m. There is an incline in Section 2 towards the overpass over Highway 407, which is situated at elevation approximately 191m, south of which there is a depression as Kennedy Road passes beneath a set of railway tracks. Elevations increase towards 14<sup>th</sup> Avenue, positioned at 205m. Topography remains relatively flat throughout most of Section 3, declining further in the southern

portion to a low point of approximately 174m north of Highway 7. Section 4 topography inclines from an elevation<sup>1</sup> of approximately 183m at 16<sup>th</sup> Avenue to 208m at Major Mackenzie Drive.

Kennedy Road is generally at a similar elevation as the surrounding areas.

In general, the regional groundwater flow direction is expected to be south towards Lake Ontario. Local groundwater in Sections 1 and 2 is anticipated to flow north towards the Rouge River while local groundwater in the southern portion of Section 3 is anticipated to flow south towards Bruce Creek. Local groundwater in the northern portion of Section 3 and throughout Section 4 is anticipated to flow east towards Eckardt Creek or west towards Bruce Creek. It should be noted that the local groundwater flow may be influenced by underground utilities (i.e., service trenches) and building structures.

According to Ontario Ministry of Northern Development and Mines maps, the surficial geology varies along the study area. Throughout Section 1 and in the southern portion of Section 2, the surficial geology is comprised of glacial deposits of the Newmarket / Northern / Bowmanville Till. The surficial geology in Section 2 is predominantly comprised of glaciolacustrine deposits located in the north portion of the section. The surface geology in Sections 3 and 4 is comprised predominantly of glaciolacustrine deposits consisting of clayey silt or silty sand, and localised areas of glacial deposits of the Newmarket / Northern / Bowmanville Till, consisting of diamicton (sandy silt to sandy till). North of Highway 7, along the Rouge River, the surface geology is stated to comprise of Quaternary river deposits, consisting of sand and gravel.

Based on the Ministry of the Environment and Climate Change (“MOECC”) water well records for the study area, subsurface conditions are generally consistent with the recorded geology. Generally, the strata recorded comprised of a layer of topsoil over bands of clay, sand and silt of varying thicknesses and proportions. In Section 4, the geology generally consisted of topsoil overlying clay (till).

The bedrock within the study area is reported to consist of Upper Ordovician shale, limestone, dolostone, and siltstone. Shale bedrock was encountered at a depth of 62m below ground surface (‘bgs’) in a water well record in Section 2 of Kennedy Road.

### 3.0 INFORMATION REVIEW

In order to assess historical and current land uses and to identify properties with the potential to have impacted the study area, a review of the information from the following sources was conducted:

- EcoLog ERIS report;
- Aerial Photographs obtained from York Region Interactive Maps and Spatial Data website;
- Regulatory records requested from York Region and Technical Standards and Safety Authority;
- Previous reports; and,
- Drive-by and/or walkthrough reconnaissance of the study area (refer to Section 4).

#### 3.1 Environmental Database Review

Golder Associates retained EcoLog Environmental Risk Information Services Ltd. (“EcoLog ERIS”) to search available federal, provincial, and private-sector environmental databases for the properties located within the study area (250 metres on both sides of the Kennedy Road ROW). A copy of the EcoLog ERIS report is

<sup>1</sup> Elevations approximated according to Google Earth™

included in Appendix A. Noteworthy findings from Golder's review of the EcoLog ERIS report are summarized in Section 5.

### 3.2 Aerial Photographs

Aerial photographs for the study area were available on the York Region Interactive Maps and Spatial Data website (Copyright by the Regional Municipality of York (2017), online access available at <https://ww6.yorkmaps.ca/YorkMaps/nindex.html>). The following years were reviewed as part of this assessment: 1954, 1970, 1978, 1988, 1995, 1999, 2002, 2005, 2007, 2009 and annually from 2011 to 2016.

#### Section 1

The review of the 1954 aerial photograph indicated that the lands within Section 1 of the Kennedy Road study area from 14<sup>th</sup> Avenue to Steeles Avenue consisted primarily of agricultural land with residential and farm structures. Railway tracks were present between Denison Street and Steeles Avenue, orientated approximately north-west to south-east. By 1988, Kennedy Road had been established in its current alignment, and residential development was present to the east of Kennedy Road, south of 14<sup>th</sup> Avenue, and to the west of Kennedy Road, north of Steeles Avenue. Miliken Mills High School and Community Centre were present to the west of Kennedy Road, north of Denison Street. The Denison commercial shopping centre had been constructed to the west of Kennedy Road, south of Denison Street, and a unit with a commercial or industrial appearance was shown to the north of Steeles Avenue, east of Kennedy Road. By 1995, residential development had expanded slightly, and Pacific Mall and Shopping Complex had replaced the smaller commercial or industrial unit, to the north of Steeles Avenue, east of Kennedy Road. The maps for 1999 and 2002 showed expansion of the existing residential development, and construction of further commercial units south of 14<sup>th</sup> Avenue. No significant changes were depicted on the most recent map for 2017.

#### Section 2

The review of the 1954 aerial photograph indicated that the lands within Section 2 of the Kennedy Road study area from Highway 7 to 14<sup>th</sup> Avenue consisted primarily of agricultural land with residential and farm structures. The review of the 1970 aerial photograph indicated that further residential properties had been constructed on Highway 7 and Helen Avenue and railway tracks were shown north of 14<sup>th</sup> Avenue; however, land use in the majority of the Section was similar to that of 1954. No significant changes were noted on the maps until the 1988 aerial photograph, when the current alignment of Kennedy Road had been established and residential sub-divisions had been constructed to the east of Kennedy Road, along Highway 7 and between the railway tracks and 14<sup>th</sup> Avenue. By 1995, commercial plazas and units had been constructed to the west of Kennedy Road, south of Highway 7, and north of 14<sup>th</sup> Avenue, and by 1999, Highway 407 was present between Helen Road and the railway tracks, orientated east to west. The subsequent maps of 2002, 2005, 2007, 2009, 2011 and 2012 depicted gradual commercial development to the east and west of Kennedy Road between Highway 7 and Helen Avenue. No significant changes were depicted on the latest map for 2017.

#### Section 3

The review of the 1954 aerial photograph indicated that the land within the Kennedy Road study area from 16<sup>th</sup> Avenue to Highway 7 consisted primarily of undeveloped agricultural land with residential and farm structures. A railway line passed through the southern portion of the study area. The subsequent map of 1974 depicted a pond present in the study area to the south of the railway line, with a river located to the south of the pond. No significant changes were noted until the map of 1988 when Kennedy Road in its current alignment had been established, replacing the pond. Residential properties had been constructed in the northern portion of Section 3, predominantly to the west of Kennedy Road; the remaining land continued to be agricultural or undeveloped land. Buildings with a commercial or industrial appearance had been established at the

intersection of Kennedy Road and Highway 7. By 1995, residential development had expanded to both sides of Kennedy Road in the northern and central portions of Section 3, and north of the intersection at Highway 7. No significant changes were noted on the latest map for 2016.

### Section 4

The review of the 1954 aerial photograph indicated that the land within Section 4 of the Kennedy Road study area (Major Mackenzie Drive East to 16<sup>th</sup> Avenue) consisted primarily of undeveloped agricultural land with residential and farm structures. Several residential properties were located to the west of Kennedy Road in the south portion of Section 4. No significant changes were noted until the map for 1999, when residential development had commenced alongside Kennedy Road in the northern portion of Section 4, with further residential expansion by the map of 2002. No significant changes were noted on the map for 2015, when a school had been constructed on the south side of the Kennedy Road and 16<sup>th</sup> Avenue intersection, and extensive residential development had occurred to the east of Kennedy Road in the south portion of Section 4; the land to the west of the road in this portion remained agricultural.

A review of the aerial photographs did not identify any obvious issues of potential environmental concern for the study area, however, it should be noted that due to the resolution of the aerial photographs for the study area, no specific details regarding the historical land uses of the properties located within the study area could be observed.

## 3.3 Regulatory Requests

### 3.3.1 York Region

At the request of Golder, HDR contacted the Region and requested copies of any previous environmental reports it may have on file related to the study area. Several reports were provided and are summarized in Section 3.4 below.

### 3.3.2 Technical Standards and Safety Authority ("TSSA")

The TSSA was contacted via e-mail to determine if any fuel storage tanks were registered on the following selected addresses along Kennedy Road between Steeles Avenue and Major Mackenzie Drive. A summary of the TSSA responses is provided for each address and a copy is provided in Appendix B.

#### Section 1

- 4575 Steeles Avenue: no records held;
- 7035 Kennedy Road: no records held;
- 7733 Kennedy Road: records indicate two active fuel oil tanks; and
- 7749 Kennedy Road: records indicate the site is a full-service gasoline station with two (2) active full-service cylinder exchange, four (4) active tanks and four (4) inactive tanks.

#### Section 2

- 8210, 8111 and 7997 Kennedy Road: no records held;
- 8061 Kennedy Road: records indicate an expired small full-service bulk plant;

- 8099 Kennedy Road: records indicate an expired full-service gasoline station and three (3) expired full-service liquid fuel tanks;
- 25 South Unionville Avenue: no records held;
- 8350, 8332, 8338 and 8220 Kennedy Road: no records held;
- 4641 Highway 7: records indicate an expired full-service gasoline station and four (4) expired full-service liquid fuel tanks; and
- 4611 Highway 7: no records held.

### Section 3

- 4600 Highway 7: no records held; and,
- 4780 Highway 7: a record is held of an active full-service cylinder exchange (propane).

### Section 4

- 9693 Kennedy Road: no records held.

## 3.4 Previous Reports

The following reports were provided by the Client to Golder for review as they are relevant to this assessment:

### Section 1: Steeles Avenue to 14<sup>th</sup> Avenue

***Preliminary Hydrogeological Investigation, Miliken Secondary Plan, Markham, Ontario, prepared by Norbert M. Woerns, dated November 1 2016, no reference.***

The report was undertaken for the City of Markham to identify for protection the components of The Greenway System and Natural Heritage Network in accordance with the Official Plan (2014). The study aimed to characterize the hydrologic features and functions of the site. A portion of the study area lies within 250m of the Kennedy Road ROW. This portion consisted of vacant land south of Denison Street and north of the railway tracks in Section 1, to east of Kennedy Road, and a small portion of Kennedy Road. The west central portion of the site was comprised of a wetland at the time of the study. 'Significant deposits' of fill materials were observed on areas of the site.

Six hand auger holes were advanced to 1.0m bgs, of which two auger holes were located within 250m of the Kennedy Road ROW. The geology encountered comprised of topsoil over silt over sandy silt. No visual or olfactory evidence of hydrocarbon contamination was recorded on the hand auger logs for the two holes. Groundwater was encountered at depths of 0.26m and 0.5m bgs. No contamination assessment of soil or groundwater was undertaken.

### Section 2: 14<sup>th</sup> Avenue to Highway 7

***Hydrogeological Assessment Report for Application to Renew Permit to take Water 1500mm Diameter Kennedy Road Watermain, prepared by Coffey, dated 25 March 2014, reference ENVSETOB10389AA.***

The report was prepared in support of an application by The Regional Municipality of York to renew a Permit to Take Water for construction dewatering associated with the tunneling of a section of 1500mm diameter

watermain on Kennedy Road from GO Transit railway tracks, south of Carlton Road in the north to 14<sup>th</sup> Avenue in the south.

A number of previous geotechnical and hydrogeological assessment reports were reviewed as part of the study. A total of 30 boreholes were previously drilled by Coffey, with roughly evenly-spaced coverage along the length of the study area. The geology encountered was summarised as fill over silty clay / clayey silt and occasional sand and gravel deposits overlying weathered shale bedrock, encountered in one location at approximately 19m bgs. No visual or olfactory evidence of hydrocarbon contamination was noted in the borehole logs. Groundwater depths ranged from approximately 3.5m bgs to 5.9m bgs. No soil or groundwater analysis was undertaken for contamination.

### **Section 3: Highway 7 to 16<sup>th</sup> Avenue**

***Geotechnical Investigation, Proposed Road Widening, Kennedy Road and Birchview Lane, prepared by Trow Associates Ltd, dated June 5, 2017, reference BRGE00283621A;***

The report was commissioned by the Regional Municipality of York for a proposed road widening at the east side of Kennedy Road at Birchview Lane for a distance of approximately 405m. The investigation was undertaken to assess the soil and groundwater conditions.

The intrusive investigation comprised of drilling three boreholes by continuous flight auger technique located from north of Birchview Avenue in the north to The Bridle Trail in the south (Section 3 of this study). Boreholes were drilled to a maximum depth of 4.3m below ground level (bgl) and a total of three soil samples were analysed for selected general and inorganic parameters.

In general, the ground conditions comprised of a surface of existing pavement structure or topsoil over fill over silty clay / clayey silt. No visual or olfactory evidence of hydrocarbon contamination was recorded on the borehole logs. Groundwater was encountered in two of the three boreholes at depths of 2.5m bgs and 2.8m bgs. The analytical results did not exceed Table 2: Full Depth Generic Site Condition Standards in a Potable Groundwater Condition for agricultural and other use.

### **Section 4: 16<sup>th</sup> Avenue to Major Mackenzie Drive**

***Hydrogeological Assessment and Water Balance, 4134 16<sup>th</sup> Avenue prepared by R J Burnside and Associates Ltd, September 2016 reference 038247.***

The study area was a golf club and undeveloped land on the west side of Kennedy Road, north of 16<sup>th</sup> Avenue (Part Lots 16, 17 and 18, Concession 5), extending to Warden Avenue in the west (i.e. beyond the study area of this report). The purpose of the report was to support the application of a residential development, and aimed to characterize the geological and hydrogeology on the site.

Records of previous third party geotechnical investigations at the site were reviewed; superficial geology generally comprised of glaciolacustrine silt and clay deposits, with some sand and gravel deposits. Bedrock comprised of grey shale of the Blue Mountain Formation and was encountered between 35m and 57m below ground surface (bgs). Shallow groundwater was encountered between depths of 0.2m bgs and 4.9m bgs. Background groundwater quality was assessed by measuring pH levels and analysing for selected metals, basic ions and conductivity. Concentrations of sodium, total dissolved solids, iron, manganese and chloride were noted to exceed the relevant Ontario Drinking Water Standards.

***Preliminary Geotechnical Investigation, Proposed Residential Development, 4134 16<sup>th</sup> Avenue, Markham, Ontario, prepared by Golder Associates Ltd, dated September 29, 2016, reference 1413472.***

The investigation was undertaken to provide preliminary geotechnical information in support of an Official Plan Amendment ('OPA') application to permit a residential development on the west side of Kennedy Road, north of 16<sup>th</sup> Avenue (Part Lots 16, 17 and 18, Concession 5), extending to Warden Avenue in the west. A total of 34 boreholes were drilled on the subject site to a maximum depth of 8.23m bgs.

Ground conditions encountered comprised of a surface of concrete or asphalt overlying topsoil or fill. The underlying native material consisted of shallow glaciolacustrine deposits of silty clay, clayey till and sandy silt overlying glacial till ranging from silty sand to silty clay, with some granular deposits. Groundwater was encountered at depths ranging from 1.2m to 5.9m bgs.

The report referred to a previous Phase II Environmental Site Assessment from January 2015, the findings of which were not discussed in the report. No visual or olfactory evidence of hydrocarbon contamination was recorded on the borehole logs.

***Report on Subsurface Investigation for Kennedy Road and Birchview Lane Intersection Improvements, prepared by Geo-Canada, dated June 2006, reference G-06.0406***

The report was prepared to assist in the design of the pavement structure, and comprised of eight boreholes located at the Kennedy Road and Birchview Lane intersection, to a maximum depth of 4.3m bgs. Geology encountered comprised of asphalt over granular sub-base overlying fill (clayey silt), which was underlain by native material comprising of till (clayey silt or silty clay), which was observed to be saturated. No visual or olfactory evidence of hydrocarbon contamination was identified in the soil. Two soil samples were analysed for the general and inorganic parameters specified by the MOECC Soil Standards for Use under Part XV.1 of the Environmental Protection Act. Analytical results satisfied Table 2: Full Depth Generic Site Conditions Standards in a Potable Groundwater Condition for a commercial / industrial land use.

## 4.0 STUDY AREA RECONNAISSANCE

A visual field reconnaissance of the study area was conducted on June 19, 2017 to assess the current land usage in the study area and associated potential for subsurface environmental contamination. This assessment included a cursory overview, via a "drive-by" and/or walkthrough field reconnaissance of the study area, and does not constitute a complete assessment of these lands.

The following land uses within the study area were observed:

- Section 1 (roughly between Steeles Avenue and 14<sup>th</sup> Avenue) – the land use was primarily mixed residential and commercial, with occasional light industrial use. Observations included the following:
  - Residential sub-divisions, a church and a builder's merchant / garden centre (4266 Steeles Avenue) located to the west of Kennedy Road between the railway tracks and Steeles Avenue. Residential properties were also located to the east of Kennedy Road, south of Steeles Avenue;
  - A large commercial plaza (4300 Steeles Avenue) located on the north-east side of Steeles Avenue and Kennedy Road, including restaurants, shops, clinics and dentist offices. No dry cleaners were observed;
  - Vacant land was located on the east side of Kennedy Road, bound by an unnamed road south of a residential apartment building south of Denison Street, and the railway tracks to the south. The land

was vegetated and the surface was undulating with an approximately 3m high mound. Several potential monitoring wells were observed on the land;

- Railway tracks orientated approximately north-west to south-east cross Kennedy Road between Denison Street and Clayton Drive;
- Commercial end-uses to the north and south of Denison Street including, to the north: a commercial plaza at 7381 Kennedy Rd, a commercial building occupied by a construction company on the west side of Kennedy Road. To the south of Denison Street, on the west side of Kennedy Road, is a commercial plaza (7220 Kennedy Road) and a smaller commercial plaza (7380-7510 Kennedy Rd), including medical offices, a convenience store, bank and restaurants;
- A school, a community centre, a library, fast-food outlet and a soccer dome were located to the west of Kennedy Road, between 14<sup>th</sup> Avenue and Denison Street;
- Commercial or light industrial units were observed to the east of Kennedy Road, north of Denison Street, including a unit occupied by Bell (7733 Kennedy Road) where an underground storage tank and four outfalls into a drainage channel to the north of the property were observed; a bridal store, a grocery store, a unit occupied by a glass supplier, roofing and building material merchant, and a small commercial shopping plaza ("Kenlee Plaza");
- A commercial shopping plaza (7750 Kennedy Road), and other commercial retail and fast-food outlets were observed to the west of Kennedy Road, south of 14<sup>th</sup> Avenue; and,
- Two gas stations were observed, including ESSO gas station (7749 Kennedy Road) and Petro Canada gas station (4575 Steeles Avenue), both of which operated a car wash. At the ESSO gas station, three vent pipes and seven manhole covers which potentially may represent tank lids were observed. At the Petro Canada gas station, four potential tank lids and four vents were observed.
- Section 2 (roughly between 14<sup>th</sup> Avenue and Highway 7) – the land use is predominantly commercial with some light industrial and residential areas;
  - Residential subdivision and school to the east of Kennedy Road between the railway lines and 14<sup>th</sup> Avenue and a cemetery to the east of Kennedy Road, north of 14<sup>th</sup> Avenue;
  - Commercial centres, including a building occupied by a multi-purpose community and aquatics centre (16 Main Street, Unionville), a supermarket, and two multi-tenanted buildings occupied by restaurants, a children's centre and offices to the south of Highway 407;
  - Railway tracks situated on an embankment, elevated approximately five to eight metres above the surrounding land use, located south of the agricultural land, south of Highway 407;
  - Undeveloped land on the north and south sides of Highway 407, some of which appeared to be agricultural;
  - A vehicle oil change centre was located on the west side of Kennedy Road, north of Unionville Gate;
  - Six car dealerships located between Highway 7 and Highway 407, each with an automotive service centre. A car wash was observed at two of the properties. The dealerships and service centres could not be observed closely at all properties;
  - Four medium to large commercial plazas; 8380 – 8392 Kennedy Road and 8360 Kennedy Road, both located on the west side of Kennedy Road, on the south side of Highway 7; 8339 Kennedy Road and

32 South Unionville Avenue, both on the east side of Kennedy Road, north of South Unionville Avenue. The plazas included restaurants, beauty salons, dentists and pharmacies. No dry cleaners were observed;

- A residential estate located to the east of Kennedy Road with associated services / amenities including a Christian living centre, gospel hall, a college and university application centre to the east of Kennedy Road, south of Highway 7;
  - Commercial units / plazas south of Highway 7, east of Kennedy Road include a fast food outlet, a furniture store, and an alcohol store. Two 205 litre drums were observed in the waste storage area to the south of an alcohol store with hydrocarbon staining observed on the underlying concrete surfacing; and,
  - Two gas stations, both with car washes were observed (8330 Kennedy Road), operated by Shell. Four tank vents and three man hole covers were observed at the property.
- Section 3 (roughly between Highway 7 and 16th Avenue) - the land use is generally residential and commercial with green spaces. Observations included the following:
- A commercial plaza (5694 Highway 7) including a service centre, an automotive parts stockist, an animal hospital, beauty salons and restaurants;
  - A used car dealership, a vehicle repair workshop and a vehicle rental company were located from approximately 100m west of Kennedy Road ROW, north of Highway 7. The rear of the property could not be observed from public accessible spaces;
  - One gas station was observed (4780 Highway 7), north of Highway 7 and east of Kennedy Road. The station was operated by Petro Canada and included a car wash;
  - Commercial units including a drug store and a bank to the west of Kennedy Road north of Highway 7, and a dentist to the east of Kennedy Road, north of Highway 7;
  - The Rouge Valley Trail passing beneath Kennedy Road to the north of Austin Drive;
  - Residential sub-divisions;
  - Railway tracks observed orientated east - west between Carlton Road and Austin Drive; and,
  - Two small commercial plazas (33 The Bridle Trail and 538-548 Carlton Road), both including dry cleaners, shops and services.
- Section 4 (roughly between 16<sup>th</sup> Avenue and Major Mackenzie Drive) – the land use is primarily residential with some commercial land use. Observations included the following:
- A vent, potentially associated with an oil water interceptor, was observed in the grass verge to Kennedy Road;
  - A church, cemetery and a school to the north of 16<sup>th</sup> Avenue;
  - Residential subdivisions along the length of the section;
  - Machinery and equipment for maintenance was observed at Industrial Property Services, 9693 Kennedy Road. A potential above ground storage tank was observed to the rear of the property;

- Three areas of construction activities; in the centre east of Kennedy Road (residential development), and on the east and western sides of Kennedy Road, in the southern portion of the section. Stockpiles of soil and / or building materials were observed associated with the areas;
- Undeveloped grassland adjacent to a golf club that was observed to be undulating and hummocky;
- Two medium sized commercial plazas (9970 – 10000 Kennedy Road and 10-20-50 Bur Oak Avenue, Markham), both including dry cleaners, restaurants, banks and medical offices; and,
- Two stormwater management ponds; one located south of Major Mackenzie Drive and one located north of 16<sup>th</sup> Avenue, both on the east side of Kennedy Road.

During the site visit, no staining or distressed vegetation, which might indicate the presence of subsurface impact, were observed within the study area.

A photographic record of the reconnaissance is provided in Appendix C. Land use and locations of notable observations are shown on Figures 2A, 2B, 2C and 2D.

### 5.0 AREAS OF POTENTIAL ENVIRONMENTAL CONCERN (“APECs”)

The following table provides a summary of APECs identified based on the records review and field reconnaissance. APEC locations are shown on Figures 2A, 2B, 2C and 2D. Included in Table 1 is a risk ranking for each of the identified APECs (i.e., a ranking of low, moderate or high potential for subsurface contamination). The following were considered when selecting the ranking for each APEC:

#### Low Risk Ranking:

- The APEC is not located directly in or immediately adjacent to the Kennedy Road ROW;
- Contaminants are likely limited in extent and likely only present in surficial soil;
- Migration, exposure pathways and receptors are likely limited; and/or,
- Impacts can likely be easily managed prior to or during construction.

#### Moderate Risk Ranking:

- The APEC is located directly in or immediately adjacent to the Kennedy Road ROW;
- Contaminants are likely to be present across a large portion of the property at which the APEC was identified;
- Contaminants are likely present in soil and/or groundwater;
- Migration, exposure pathways and/or receptors may be present; and/or,
- Impacts would need to be assessed and addressed prior to acquisition, design and/or construction.

#### High Risk Ranking:

- The APEC is located directly in or immediately adjacent to the Kennedy Road ROW;
- Contaminants are likely wide spread across the site;

## CONTAMINATION OVERVIEW STUDY, KENNEDY ROAD RIGHT-OF-WAY, MARKHAM, ONTARIO

- Contaminants are likely present in soil and groundwater;
- Impacts are likely mobile and migrating across, onto and/or off-site;
- Source of impacts is likely still present;
- There are several receptors and exposure pathways; and/or,
- Impacts would need to be assessed and addressed prior to acquisition, design and/or construction.

**Table 1: Summary of Identified APECs**

| ID on Figures 2A, 2B and 2C           | Property/Activity of Potential Environmental Concern                                                | Location                                                             | Comments/observations from the site visit                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Risk Ranking | Information Sources |
|---------------------------------------|-----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|---------------------|
| <b>Section 1 – refer to Figure 2A</b> |                                                                                                     |                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |              |                     |
| 2A-1                                  | Presence of a retail fuel service station and car wash (“Petro Canada”) with two (2) historic leaks | 4575 Steeles Avenue (adjacent to the south-east of Kennedy Road ROW) | The Ecolog Eris report recorded three (3) spills at the property; the first was a container overflow in 1989 (no further details provided) and the second was an underground tank leak in 1991 where 45 L of gasoline discharged to the pavement during delivery. An environmental impact was not anticipated. Also in 1991, 12 L of power steering oil leaked onto ground from a tank truck line. An environmental impact was considered possible. There are three (3) records of an approximate 109,000 litre fuel storage tank at the property, dated 1994 to 1996 for retail purposes. The site is also a waste generator of light fuels and waste sludges from 2016. During the site visit, a total of four (4) tank lids were observed. No evidence of significant fuel spillages was observed during the visit. | Moderate     | Ecolog ERIS report  |
| 2A-2                                  | Possible historic gas station with 150,000 litre tank and historic leak.                            | 7035 Kennedy Road (adjacent to the east of                           | A spill was registered to Imperial Oil at a Texaco Service Station at 7035 Kennedy Road and a second property in                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Moderate     | EcoLog ERIS report  |

## CONTAMINATION OVERVIEW STUDY, KENNEDY ROAD RIGHT-OF-WAY, MARKHAM, ONTARIO

|      |                                                                                                                                                   |                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |                                    |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|------------------------------------|
|      |                                                                                                                                                   | Kennedy Road ROW)                                            | Scarborough in 1990. A pipe or hose leak resulted in 1800 L diesel discharging to ground and storm sewer. Environmental impact to a watercourse or lake was confirmed. It is unclear to which property the record relates. There is an Ecolog record of a retail fuel tank at Ratten Gas Bar in 1995, with a capacity of 150,000 litres. It is unclear as to where the site was located; aerial photographs depict the site as undeveloped land until it became a car park in 1988. |          |                                    |
| 2A-3 | Spill of unknown volume of transformer oil to ground in 2016 ("PowerStream Inc")                                                                  | 1 Highglen Avenue (approx. 10m east of Kennedy Road ROW)     | The Ecolog ERIS report did not specify if an environmental impact was possible. No further information was provided.                                                                                                                                                                                                                                                                                                                                                                | Low      | Ecolog ERIS report                 |
| 2A-4 | Hazardous waste generation for at least 26 years at High School ("Miliken Mills High School")                                                     | 7522 Kennedy Road (adjacent to the west of Kennedy Road ROW) | Wide range of wastes generated from 1992 to at least 2016, including organic waste, waste crankcase oils and lubricants, aliphatic solvents, wastes from the use of pigments, coatings and paints, acid and alkaline solutions containing heavy metals. No evidence of significant spillages of waste on historical aerial photos.                                                                                                                                                  | Low      | Ecolog ERIS report, aerial photos. |
| 2A-5 | Presence of an underground storage tank ("UST") at property occupied by a telecommunications distributor since at least 1979 ("Bell") (138 & 116) | 7733 Kennedy Road (20m east of Kennedy ROW)                  | According to the Ecolog report, there are three records of commercial fuel tanks on-site, all of an approximate 10,000 litre capacity. The records state the tank is of fibreglass construction, reportedly 13 years old in 1992, contents unknown. A separate record stated the UST comprised of a single wall UST and the third record stated the UST comprised of a double wall. The latter two (2) records stated that the tank was active and                                  | Moderate | Ecolog ERIS report, site visit     |

## CONTAMINATION OVERVIEW STUDY, KENNEDY ROAD RIGHT-OF-WAY, MARKHAM, ONTARIO

|                                       |                                                                                                             |                                                                       |                                                                                                                                                                                                                                                                                                                                                                                     |          |                                 |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|---------------------------------|
|                                       |                                                                                                             |                                                                       | contained fuel oil, but no date was provided. This site was listed as a hazardous waste generator of light oils in 2010. A UST with overfill alarm was observed to the west (front) of the property during the site visit. No evidence of significant fuel leaks or spillages was observed.                                                                                         |          |                                 |
| 2A-6                                  | Presence of a retail fuel service station and car wash ("ESSO") with historic leak                          | 7749 Kennedy Road (adjacent to the east of Kennedy Road ROW)          | The Ecolog Eris report recorded a spill of 25 L of gasoline to the pavement in 1996, due to customer error. The spill was cleaned up. An environmental impact was not anticipated. During the site visit, a total of seven (7) tank lids were observed. No evidence of significant fuel spillages was observed during the visit.                                                    | Moderate | Ecolog ERIS report              |
| <b>Section 2 – refer to Figure 2B</b> |                                                                                                             |                                                                       |                                                                                                                                                                                                                                                                                                                                                                                     |          |                                 |
| 2B-1                                  | Spill of 38 L of Canola Oil to Road in 2004                                                                 | Intersection of Kennedy Road and Duffield Drive (on Kennedy Road ROW) | The Ecolog Eris report stated an environmental impact was not anticipated. No further details were provided. No evidence of a significant spillage was observed on Kennedy Road during the site visit.                                                                                                                                                                              | Low      | Ecolog ERIS report, site visit. |
| 2B-2                                  | Presence of a car dealership, autobody repair and service shop and car wash ("Town and Country Volkswagen") | 7997 Kennedy Road (adjacent to the east of Kennedy Road ROW).         | Hydrocarbon staining on concrete surfacing (approx. 5m <sup>2</sup> in area) was observed close to the entrance to the VW dealership. Aerial photos show the building was constructed between 1978 and 1988, replacing a building with a commercial or industrial appearance. There were no records for hazardous waste generation or private fuel tanks in the Ecolog ERIS report. | Low      | Site visit, aerial photos.      |
| 2B-3                                  | Producer of halogenated solvent waste in 1986 and 1987 at a plastic products company.                       | Shepherd Co Ltd, 8016 Kennedy Road                                    | The Ecolog Eris report recorded waste generated from this site to comprise of aromatic solvents, halogenated solvents and waste oils and lubricants in 1986 and 1987. No further                                                                                                                                                                                                    | Low      | Ecolog Eris Report              |

It is unclear as to where the record relates; the Ecolog locates the entry to Kennedy Road ROW itself.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |          |                                  |
| 2B-4 | Record of a retail fuel tank                                                                                                        | Sunys Petroleum Inc, 8024 Kennedy Road                                       | A retail fuel tank was recorded to this site with a capacity of 91,800 in 1994. It is unclear as to where the record relates; the Ecolog locates the entry to Kennedy Road ROW itself.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Moderate | Ecolog Eris Report               |
| 2B-5 | Presence of a car dealership with autobody repair and service shop ("Town and Country BMW") and possible former retail gas stations | 8061, 8099 and 8111 Kennedy Road (adjacent to the east of Kennedy Road ROW). | Private fuel tank with a 21,249 L capacity recorded at an Esso Petroleum Ltd Site, recorded to this location (addressed at 8099 Kennedy Road) in 1992 for retail purposes; and a 10,000 L capacity private fuel tank registered to Penguin Petroleum Products Ltd at 8061 Kennedy Road in 1994. Aerial photos show the site to first be developed with the existing car dealership building between 1999 and 2002, replacing a residential property. No evidence of former retail gas station noted on aerial photos. TSSA indicated records for an expired gasoline service station at 8099 Kennedy Road and an expired full service bulk tank at 8061 Kennedy Road. Rear of the property could not be observed during the site visit; however, no evidence of ASTs or oil storage was noted on Google Earth™. Several 1000 litre totes observed stored in garage. | Moderate | TSSA, Site visit, aerial photos. |
| 2B-6 | Presence of a car dealership with autobody repair and service shop ("Markville Ford Lincoln")                                       | 8210 Kennedy Road (85m north-west of Kennedy Road ROW).                      | Rear of the property could not be observed during the site visit; however, no evidence of ASTs or oil storage was noted on Google Earth™. Aerial photos show building was constructed between 1978 and 1988. There were no records for hazardous                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Low      | Site visit, aerial photos.       |

| 2B-7 | Presence of a car dealership with autobody repair and service shop ("Village Nissan")                     | 25 South Unionville Avenue (50m east of Kennedy Road ROW).   | Potential for bulk oil storage on-site. One (1) circular AST observed (contents unknown), and a possible UST observed external to the east of the property during the site visit. Aerial photos show building was constructed between 2009 and 2011. There were no records for hazardous waste generation in the Ecolog ERIS report.                                                                                                                                                                                      | Low      | Site visit, aerial photos. |
| 2B-8 | Presence of a car dealership with autobody repair and service shop and historic spill ("Markham Honda").  | 8220 Kennedy Road (adjacent to west of Kennedy Road).        | Potential for bulk oil storage on-site. One AST storing ethylene glycol observed external to the north of the property during the site visit. Aerial photos show building was constructed between 1978 and 1988. There were no records for hazardous waste generation in the Ecolog ERIS report. There is a record of a spill of 225 L of mineral oil to a lawn at the property in 1997. An environmental impact to the land was confirmed.                                                                               | Low      | Site visit, aerial photos. |
| 2B-9 | Presence of a retail fuel service station and car wash (Shell Garage) with two (2) historical fuel spills | 8338 Kennedy Road (adjacent to the west of Kennedy Road ROW) | According to the Ecolog Eris Report, a pipe / hose rupture resulted in 1 litre leak of gasoline to ground in 1995. The spill was cleaned up. The second incident involved a leak of 10 L of gasoline to ground, also in 1995, due to corrosion of a container belonging to a private owner. Environmental impacts were not anticipated for either incident. There is a record of a retail fuel tank registered to the site with a 32996 litre capacity, dated 1995. During the site visit, a total of three (3) tank lids | Moderate | Ecolog ERIS report         |

| 2D-1 | Potential above ground storage tank and historic spill at a supplier of machinery and equipment for maintenance ("Industrial Property Services") | 9693 Kennedy Road (approx. 100m east of Kennedy Road ROW) | The site is registered as a hazardous waste generator of waste oil and lubricants, aliphatic solvents, petroleum distillates and oil skimmings and sludges in relation to general automotive repair and garages in the Ecolog Eris report between 1992 and May 2015. A spill of 13.6 L of petroleum based oil onto a construction site was recorded in 2005. According to the Eris report, soil contamination was possible. A potential above ground storage tank (AST) was observed at a supplier of machinery and equipment for maintenance. | Low | Ecolog ERIS report<br>Site visit |
| 2D-2 | Presence of a dry cleaning facility ("Bur Oak Garment Care")                                                                                     | 20 Bur Oak Avenue, (approx. 75 m east of Kennedy ROW)     | A dry cleaner was observed within the commercial plaza at Bur Oak Avenue. Based on aerial photos, the plaza was constructed between 2005 and 2007. There were no records for hazardous waste generation in the Ecolog ERIS report.                                                                                                                                                                                                                                                                                                             | Low | Site visit, aerial photos        |

## CONTAMINATION OVERVIEW STUDY, KENNEDY ROAD RIGHT-OF-WAY, MARKHAM, ONTARIO

|      |                                                                                                      |                                                                           |                                                                                                                                                                                                                                                                                                         |     |                             |
|------|------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------------------------|
| 2D-3 | Former hazardous waste generation at former machine shop ("Weatherill Advanced Control Systems Ltd") | 9765 Kennedy Road (60m east of Kennedy Road ROW)                          | Waste oils, lubricants and emulsified oils were generated in a former machine shop between 1999 and 2001. It is not clear from aerial photos where the machine shop was located.                                                                                                                        | Low | Ecolog Eris, aerial photos  |
| 2D-4 | Presence of a dry cleaning facility ("Master's Cleaners")                                            | 9980 Kennedy Road (approx. 75m west of Kennedy Road ROW)                  | A dry cleaner was present within the commercial plaza at Angus Glen. Based on aerial photos, the plaza was constructed between 2013 and 2015. There were no records for hazardous waste generation in the Ecolog ERIS report.                                                                           | Low | Site visit, aerial photos   |
| 2D-5 | Spill of 200 L of diesel to ground and ditch at a transportation company ("Maple Leaf Transport")    | 4495 Major Mackenzie Road (adjacent to Kennedy Road ROW on the west side) | There is one (1) record of a spill in the Ecolog Eris report. The spill occurred in 1991 when 200 L of diesel leaked to the ground and a ditch. An environmental impact was confirmed. The Angus Glen shopping complex was constructed on the approximate location of the record between 2011 and 2012. | Low | Ecolog Eris, aerial photos. |

## 6.0 KEY FINDINGS AND RECOMMENDATIONS

Based on the findings of the COS conducted on the study area, several APECs were identified as having the potential for subsurface impacts on the Kennedy Road ROW. The findings are as follows:

- Seven (7) gas stations and four (4) dry cleaners were observed within the study area;
- Several properties within the study area were identified as having former and/or current private and retail fuel tanks on site. The condition and operation period of these tanks is unknown;
- Nine (9) autobody repair and service shops were identified within the study area;
- Multiple environmental spills including diesel fuel, gasoline, transformer oil and fuel oil were listed on or adjacent to the Kennedy Road ROW, some of which were associated with retail gas stations. The spills ranged in size from 38 L to 1,800 L and environmental impacts were unknown or not confirmed in many cases.

In addition to the above, it is anticipated that fill material and salt-related impacts as a result of roadway de-icing activities may be present along the Kennedy Road ROW.

Golder understands that the details and design of the planned improvements to Kennedy Road have not been fully determined. Based on this and the above findings, the following preliminary recommendations are provided:

- Conduct a subsurface investigation in the vicinity of each APEC identified as having a moderate risk in order to assess the potential presence of subsurface contamination and the potential for impacts, if any, to affect the proposed ROW improvements. Depending on the depth of excavation required for the proposed ROW improvement, the investigation may include the characterization of both soil and groundwater quality; and
- Incorporate requirements in the construction specification regarding the environmental characterization and management of excess soil.

Once more details are available regarding the proposed ROW improvements, more detailed recommendations can be provided. The subsurface investigation may consist of the drilling of boreholes, installation of groundwater monitoring wells and the collection and analysis of soil and groundwater samples. The number and type of tests would be dependent upon the identified APEC, its proximity to the ROW and the proposed improvements. Consideration should be given to conducting the environmental investigation program in conjunction with the proposed future geotechnical investigation program.

## 7.0 LIMITATIONS AND USE

This report was prepared for the exclusive use of HDR Corporation and The Regional Municipality of York. This report is based on data and information collected during the Contamination Overview Study of the study area conducted by Golder Associates Ltd. and is based solely on site conditions encountered at the time of the site visit on June 19, 2017 supplemented by limited historical information and geological data obtained by Golder Associates, as described in this report.

This report has been prepared as part of environmental due diligence purposes and is not intended to be used as supporting documentation for a Record of Site Condition under Ontario Regulation 153/04. If a Record of Site Condition is required for the properties within the study area and this report is to be used as part of the supporting documentation, it must be reviewed and updated by Golder Associates Ltd. Additional environmental site assessment activities would be required to comply with Ontario Regulation 153/04.

In evaluating the site, Golder Associates Ltd. has relied in good faith on information provided by others. We accept no responsibility for any deficiency, misstatements or inaccuracies contained in this report as a result of omission, misinterpretations or fraudulent acts of the persons interviewed. Golder Associates Ltd. accepts no responsibility for any reduction in property value, either real or perceived, as a result of the reporting of factual information herein.

It should be noted that the results of an investigation of this nature should, in no way, be construed as a warranty that the site is free from any and all contamination from past or current practices. This assessment was carried out using existing historical information as available from various agencies and no assurance is made regarding the accuracy or completeness of this information. No sampling of soil, groundwater, air emissions or gas was conducted.

## Report Signature Page

This Report was authored under a Subconsultant Agreement between HDR and Golder for the Regional Municipality of York's ("Owner") projects. The Report is provided to HDR and Regional Municipality of York for their use, utilizing their judgment, in fulfilling a portion of HDR's particular scope of work. No other party may rely upon this report, or any portion thereof, without Golder's express written consent and any reliance of the reports by others will be at that user's sole risk and liability, notwithstanding that they may have received this Report through an appropriate user. In addition, Golder shall not be liable for any use of the Report for any purpose other than that for which the same was originally prepared or provided by Golder, or any improper use of this Report, or to any party other than HDR.

## **Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY**

**Reliance on information in Report:** This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

**License for use of information in Report:** No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

**Your Liability for misuse:** Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

**No warranty of Accuracy or Liability for ERIS:** The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

**Trademark and Copyright:** You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

#### Bore Hole Information

--

**Bore Hole ID:** 1000055241

**DP2BR:**

**Code OB:**

**Code OB Description:**

**Open Hole:**

**Date Completed:** 10-DEC-07

**Remarks:**

**Zone:** 17

**East 83:** 636217

**North 83:** 4856005

**UTMRC:** 3

**UTMRC Description:** margin of error : 10 - 30 m

**Location Method:** wwr

**Org CS:** UTM83

**Elevation:** 203.07

**Elevrc:**

**Elevrc Description:**

**Location Source Date:**

**Source Revision Comment:**

**Improvement Location Source:**

**Improvement Location Method:**

**Supplier Comment:**

**Spatial Status:**
