

Clause 6 in Report No. 16 of Committee of the Whole was adopted, without amendment, by the Council of The Regional Municipality of York at its meeting held on November 16, 2017.

6 Creating a Regional Climate Change Action Plan

- 1. Receipt of the deputation by Helen Chen and Katherine Gotovsky, iMatter Youth Movement and referral of the proposed "Climate Inheritance Resolution" to staff.
- Adoption of the following recommendations contained in the report dated October 27, 2017 from the Commissioner of Corporate Services and Commissioner of Environmental Services and Chief Planner:
 - 1. Council endorse this report as the Region's framework and timeline (see Figure 2) for developing a Regional Climate Change Action Plan.
 - 2. Council authorize staff to apply for funding to support development of the Regional Climate Change Action Plan.
 - 3. The Regional Clerk forward this report to the Ministry of Municipal Affairs, Ministry of the Environment and Climate Change, Ministry of Energy and the Clerks of the local municipalities.

Report dated October 27, 2017 from the Commissioner of Corporate Services and Commissioner of Environmental Services and Chief Planner now follows:

1. **Recommendations**

It is recommended that:

- 1. Council endorse this report as the Region's framework and timeline (see Figure 2) for developing a Regional Climate Change Action Plan.
- 2. Council authorize staff to apply for funding to support development of the Regional Climate Change Action Plan.

3. The Regional Clerk forward this report to the Ministry of Municipal Affairs, Ministry of the Environment and Climate Change, Ministry of Energy and the Clerks of the local municipalities.

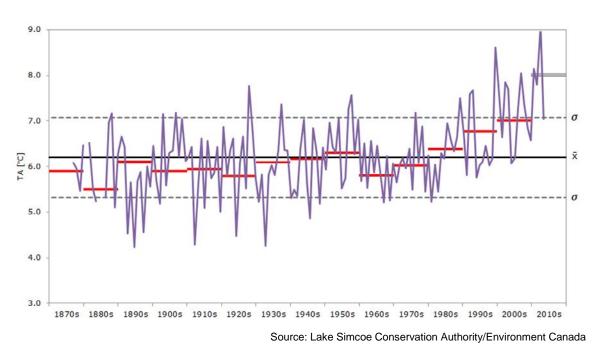

2. Purpose

This report seeks Council approval regarding a framework and high level timeline for the preparation of a Regional Climate Change Action Plan.

3. Background and Previous Council Direction

York Region is experiencing impacts of a changing climate

York Region is experiencing impacts of a changing climate with winters getting shorter, annual average temperatures growing warmer and an increasing number of extreme weather events. Figure 1 shows the increase in annual average air temperature that has occurred in the Lake Simcoe Watershed over the last thirty plus years.

Annual Average Air Temperature in the Lake Simcoe Watershed

Figure 1

Climate information tells us that the frequency and severity of extreme weather

Creating a Regional Climate Change Action Plan

events will continue to increase over time. Communities in York Region will likely continue to experience impacts and service disruptions as a result of extreme weather events such as intensive storms, heat waves and flooding. For example, the 2013 Ice Storm caused power outages, road closures and tree damage with response to this event costing York Region \$ 2.2 Million.

The Province has elevated the importance of addressing climate change

Ontario's Climate Change Strategy (2016) and Climate Change Action Plan (2017) are driving updates to Provincial legislation. As an example, the *Municipal Act* was amended giving municipalities the ability to pass climate change by-laws and the *Planning Act* was amended to identify climate change as a provincial interest. Policy direction on addressing climate change has also been incorporated into updated Provincial Plans including the Growth Plan, Greenbelt Plan and Oak Ridges Moraine Conservation Plan.

The Growth Plan requires that the York Region Official Plan contain policies that address climate change mitigation, adaptation and community resiliency

The Growth Plan requires Official Plans to include policies that address climate mitigation and adaptation to make communities more resilient to the impacts of a changing climate. These concepts will be a key focus area through the Regional Municipal Comprehensive Review and Official Plan Update. Staff have identified the need to undertake a region-wide Community Energy Plan as a component of the York Region Climate Change Action Plan. The Community Energy Plan will be developed through the Municipal Comprehensive Review and will address energy use and greenhouse gas emissions across a broad range of sectors including residential, commercial, industrial and transportation sources. It will also inform Official Plan policy development to ensure alignment between growth management, built environment and energy planning decisions to support improved community resiliency.

Council's commitment to addressing climate change is well established

York Region Council has demonstrated leadership in addressing Climate Change through endorsement of the Sustainability Strategy (2007) and Corporate Clean Air Strategy (2008). Council's commitment to addressing climate change is identified in Vision 2051 and the York Region Official Plan, 2010 (YROP 2010). In 2016, this commitment was reaffirmed through Council's endorsement of the Energy and Conservation Demand Management Plan Update that sets corporate greenhouse gas (GHG) emission reduction targets to 2051.

Internal and External Working Groups are working collaboratively to address climate change

York Region staff chair a Joint Municipal Climate Change Working Group that brings together representatives from local municipalities, conservation authorities and regional departments to work collaboratively to address climate change and community energy planning. This group has worked collaboratively to:

- Deliver climate related training to staff
- Develop a vulnerability and risk assessment framework
- Develop York Region specific historical and climate projections
- Coordinate climate change related initiatives between municipalities

In 2016, Corporate Services and Environmental Services partnered to create an Internal Climate Change Working Group. The purpose of the Working Group is to bring together staff from across departments to:

- Identify current, emerging and future actions related to climate change
- Identify opportunities for multi-departmental collaboration to address climate change
- Recommend a framework for developing a Regional Climate Change Action Plan

The Internal Climate Change Working Group includes representatives from Corporate Services, Environmental Services, Office of the CAO, Transportation Services, Community and Health Services and Finance.

Staff have leveraged the experience and expertise of the Ontario Climate Consortium on a framework to develop a Regional Climate Change Action Plan

As a network of academic, public and private sector climate experts, the Ontario Climate Consortium have participated in development of a number of municipal climate actions and vulnerability assessments. Regional staff have collaborated with the Ontario Climate Consortium to develop regional climate projections. York Region staff leveraged this expertise and experience in development of the proposed framework.

4. Analysis and Implications

A comprehensive and integrated Regional Climate Change Action Plan is required

Increasingly, the work York Region undertakes will need to include a climate lens. A majority of York Region's strategic and departmental strategies and plans directly or indirectly address climate change. Alignment will be achieved by applying a climate change lens as these plans and programs are reviewed and updated. The Regional Climate Change Action Plan will identify overarching principles, objectives and information to guide the work York Region and others undertake to address climate change. Proposed principles are included in Attachment 1.

The Regional Climate Change Action Plan will address mitigation and adaptation from a corporate and community perspective

There are two types of actions used to address climate change: mitigation and adaptation. Mitigation is taking action to reduce the amount of greenhouse gases in the atmosphere. Adaptation is taking action that minimizes or avoids the negative impacts of a changing climate. Assessing vulnerability is a process of measuring and characterizing the sensitivity and ability of systems to cope with climate change impacts. Undertaking vulnerability assessments provides the information to identify the adaptation actions required to increase system resiliency.

There is increasing recognition that addressing mitigation and adaptation together results in co-benefits and synergies for communities that support cost-effective implementation and long term resiliency. To leverage these opportunities, the Action Plan needs to address mitigation and adaptation from a corporate and community perspective, as shown in Table 1.

	Mitigation	Adaptation
Corporate	Energy Conservation and Demand Management Plan	Corporate Risk Assessments, Asset Management Plans and Infrastructure Design
Community	Region-wide Community Energy Plan	Vulnerability and Risk Assessments

Table 1 Action Plan Components

Leveraging climate-related initiatives that York Region, local municipalities and other stakeholders are undertaking is essential to focus efforts on areas of action not already being addressed

On the corporate side, mitigation is being addressed through York Region's Energy and Conservation Demand Management Plan and carbon sequestration through reforestation and tree planting activities. Corporate adaptation can be partially addressed by incorporating a climate lens into existing risk identification and asset management exercises. To the fullest extent possible, the Regional Climate Change Action Plan will address gaps in corporate adaptation activities.

Developing and implementing community action requires engagement and partnerships

In addition to demonstrating corporate leadership to address climate change for actions directly under York Region's control, York Region is uniquely positioned to ensure that climate change is addressed at the broader community scale. Developing and implementing community actions will require engagement and partnership with others and clear definition of the roles and responsibilities York Region will play through implementation. This can include leveraging existing partnerships to conduct community-scale climate analysis, coordinating consistent climate action at the local municipal level and encouraging and supporting the actions of others.

Staff are targeting Q1 2019 to present a draft Regional Climate Change Action Plan to Council

The proposed framework and timeline for development of a Regional Climate Change Action Plan is shown in Figure 2. The six-stage process provides a structured, progressive approach to development of a Regional Climate Change Action Plan.

Creating a Regional Climate Change Action Plan

These six stages will involve progressive work as detailed below:

- 1. The **Initiate and Commit** Phase was commenced in Q4, 2016 through establishment of the Internal Climate Change Working Group. Building on Council's commitment to address climate change, the Working Group began the process of understanding how York Region would be impacted by a changing climate.
- 2. In the **Organize** Phase, staff have been building internal capacity, identifying and communicating with stakeholders. This includes identifying and confirming information, research and resources required to develop the Regional Climate Change Action Plan.
- 3. The **Research** Phase will include assessing climatic changes, identifying impacts, undertaking vulnerability assessments and development of a Community Energy Plan.
- 4. The **Plan** Phase will build on consultation activities and research carried out earlier in the process to address mitigation and adaptation from the corporate and community perspective. This will include prioritizing identified areas of vulnerability and risk, action plan development and consultation as well as the establishment of a monitoring and evaluation strategy.
- 5. The **Implementation** Phase will start with Council endorsement of the Regional Climate Change Action Plan.
- 6. In the **Review** Phase monitoring and reporting will occur annually. The Action Plan should be reviewed after 5 years to allow course correction if required.

A number of studies and assessments will support the Regional Climate Change Action Plan

Staff have identified a number of research activities required to inform development and implementation of a Regional Climate Change Action Plan. One of the first activities in the Organize Phase is to undertake a Corporate Climate Risk Scan to confirm and prioritize vulnerability assessments in areas listed below:

- Health (currently underway)
 Natural Systems
- Roads, Culverts and Bridges
- Buildings
- Solid Waste
- Water and Wastewater
- Buildings

- .
- Energy
- Economy
- Technology
- Finance
- Utilities
- Social Services
- Telecommunication

• Complete Communities

The Corporate Climate Risk Scan will build upon and inform other risk activities occurring throughout the Region including enterprise risk management, corporate and infrastructure asset management planning.

In the Research Phase, staff will develop a terms of reference and apply for any available Provincial funding to undertake a Region-wide Community Energy Plan. The Community-Energy Plan will inform the Municipal Comprehensive Review and Official Plan Update. The Regional Community Energy Plan will leverage and build upon existing community energy plans developed by the Town of East Gwillimbury, City of Markham, Town of Newmarket and City of Vaughan by:

- Establishing an energy use and greenhouse gas emissions profile for York Region
- Setting consistent reduction targets aligned with Ontario's Climate Change Action Plan to leverage federal and provincial funding opportunities
- Identifying common climate mitigation actions implementable at a regional scale
- Informing development of targets and actions for incorporation into Official Plan policy

• Providing energy planning information for local municipalities without capacity and resources to do so.

Staff will leverage and build upon climate-related initiatives undertaken by local munipalities such as energy conservation, sustainability and environmental strategies. A list showing the current status of climate-related local municipal initiatives is provided in Attachment 2.

Consultation will be coordinated through the Regional Municipal Comprehensive Review

Climate mitigation, adaptation and climate resiliency have been identified as a key underlying theme in the updated Provincial Plans. Guiding principles of the Growth Plan have been amended to include integration of climate considerations in planning and managing growth to support the achievement of complete communities. From a climate change perspective, this means that York Region Official Plan policies should address the following areas:

- Urban structure
- Complete communities
- Transit and active transportation
- Vulnerability/risk assessments and adaptation planning
- Storm water management planning
- Green infrastructure/low impact development
- Watershed planning
- Natural heritage and water resource systems protection
- Energy planning
- Food security
- Protecting the agricultural land base
- Low-carbon communities, with a long term goal of net zero communities

Many of these areas are already addressed in the YROP 2010 but will need to be expanded on through the Municipal Comprehensive Review. Development and consultation on the Regional Climate Change Action Plan will be coordinated with activities and consultations through the Municipal Comprehensive Review and Official Plan Update.

Development of a Climate Change Action Plan supports Vision 2051 and the York Region Official Plan

Development of a Climate Change Action Plan supports the Living Sustainably and Open and Responsive Governance goal areas of Vision 2051. Development of the Climate Change Action Plan also supports implementation of the Healthy Communities policies in the YROP-2010.

5. Financial Considerations

York Region will apply for funds through federal and provincial funding programs specifically targeting climate change initiatives

The proposed framework for creating a Regional Climate Change Action Plan has been developed within the existing staff complement and budget. Moving forward, staff will develop a detailed work plan and identify budget requirements.

The Federal and Provincial governments have developed funding programs to help municipalities address climate change. Staff will be developing terms of reference and apply to funding programs to support development of the Community Energy Plan and the Regional Climate Change Action Plan, as shown in Table 2.

Element	Funding Agency	Funding Program	Amount
Community Energy Plan	Ministry of Energy	Community Energy Plan Program	Up to \$ 90,000 (up to 50% of eligible costs)
Climate Change Action Plan	Federation of Canadian Municipalities	Climate Change Adaptation Plans/ Mitigation Plans	Up to \$175,000 (up to 80% of eligible costs)

Table 2Funding Opportunities

6. Local Municipal Impact

York Region has established the Joint Municipal Climate Change Working Group to work collaboratively on addressing climate change with our local municipal partners. Local municipalities and York Region are working collaboratively to address climate change by advancing best practices and shared experience.

A Regional Climate Change Action Plan will provide information and identify actions that can be implemented consistently across all municipalities. To avoid duplication of effort, York Region will leverage the work local municipalities and stakeholders have already undertaken to address climate change including corporate and community energy plans, sustainability and environmental strategies, vulnerability assessments and climate adaptation action plans.

7. Conclusion

York Region is already experiencing a changing climate and recent Provincial direction has elevated the importance of addressing climate change. The Growth Plan requires that the York Region Official Plan include policies that address mitigation, adaptation and community resiliency. Increasingly, the work York Region undertakes will need to include a climate change lens. A Regional Climate Change Action Plan that identifies priority actions will promote collaborative action with internal and external partners including the local municipalities, conservation authorities and the public.

For more information on this report, please contact Paul Freeman, Director of Long Range Planning at 1-877-464-9675 ext. 71534, Laura McDowell, Director of Environmental Promotion and Protection at ext. 75077 or Teresa Cline, Senior Planner at ext. 71591.

The Senior Management Group has reviewed this report.

Accessible formats or communication supports are available upon request

Theme	Principle
Evidence	Use the best available science and evidence at the time, including common climate projections, and review regularly.
Leadership and Culture	Build leadership and enable a culture of everyone taking responsibility; "mainstream" climate change integration into department business versus entirely-new programs and/or projects.
Partnership	Establish and maintain partnerships including local municipalities, expert practitioners, academics, indigenous communities, stakeholders and the public for collective impact across areas of health, the economy and environment.
Alignment	Align with exiting initiatives that provide co-benefits and have compatible goals and objectives.
Adaptive and Flexible	Promote flexible and adaptive approaches that incorporate an iterative nature, leaving a range for future options.
Engagement	Engage the public and stakeholders in consultation and partnerships, promoting social learning.
Implementation	Implement measurable outcome-based interventions (with intent and purpose) with community benefit as the primary purpose. Be mindful of, and include, the unique needs and conditions of people who are most vulnerable.
Review	Promote an ongoing process with commitment to review, including the effectiveness and appropriateness of these principles.

York Region Climate Change Action Plan Proposed Principles

Municipality	Corporate Energy and Conservation Demand Management Plan	Community Energy Plans	Climate Change Action Plans	Sustainability/ Environmental Plans
Town of Aurora	Completed 2014	Development begins in 2018	-	Updated 2012
Town of East Gwillimbury	Completed 2014	Completed 2009	-	Updated 2012

Local Municipal Climate Change-Related Initiatives

Deputation / Request for Information Form

(Please complete all applicable sections in full.)

Committee: Committee of the Whole

Date: November 9, 2017

Agenda Item No.: _____ Title: iMatter Youth Report Card and Resolution

1. Individual Making The Deputation

Name: Helen Chen Address:

City/Town: Richmond Hill Postal Code:

Home Phone No.: Business Phone No.

Email Address:

2. Name of Group or Person(s) Being Represented (if applicable):

iMatter Youth Movement

3. Purpose of Deputation / Brief Statement of Issue:

Although there is a lot to be proud of in terms of York Region's sustainability plans and actions, there is still room for improvement. We, youth members, are here to present a report card and resolution to improve and build on the current plans and become involved to help solve climate change with the region. We hope there will be more transparency in government, so citizens could become informed on what's going on in the environment sector, the establishment of a Youth Advisory Committee so youth voices get heard and included in the government, and a goal to net zero by 2040, and 2045 by the latest. Solving climate change is a collective effort, and we'd love to work with you to make that happen. Thank you so much for your support and consideration.

I do not wish to make a deputation, however, I would like to be informed of Council's decision and receive any further information.

Personal Information on this form is collected under the legal authority of the Municipal Act, as amended and the Planning Act, as amended. The deputant's information is collected and maintained for the purpose of creating a record that is available to the general public, pursuant to Section 27 of the Municipal Freedom of Information and Protection of Privacy Act. As such, information collected here may form part of the public record. Questions about this collection should be directed to the Regional Clerk's Office, York Region, 17250 Yonge Street, Newmarket, Ontario, L3Y 6Z1, phone # 1-877-464-9675 ext. 71320.

Questionnaire on City Climate Change Impacts

Thank you for your assistance in collecting and sharing the information needed to complete this questionnaire. The data is being gathered and evaluated as part of a campaign by a national youth organization called iMatter.

With this information, we are creating a report and report card for the city. We'll share the results with you in the hope that they can be a tool to work together in engaging youth and addressing our city's approach to climate change.

Name of Cit	ty Official	Title
John	Sherin	Manager, Climate Chan
First Name	Last Name	
City		State
Regional M	unicipality of ¥	Ontario, Canada

1. Climate Action Plan

This is the most heavily weighted part of the report card because rapidly reducing emissions is probably the most important thing we can do to address the climate crisis.

Has a greenhouse gas inventory been done for the city, or is there an active one in progress? (in progress means people are working on it now and it will be done within the next 6 months)

- V Yes
- No No
- Don't know

Please include a website link to the greenhouse gas inventory (if available)

http://www.york.ca/wps/portal/yorkhome/yorkregion/yr/plansreportsandstrategies/energyreporting/regionalenergyreporting

Is there a Climate Action Plan in place for the city?

- V Yes
- No No
- Don't know

Please include a website link to the Climate Action Plan (if available)

http://www.york.ca/wps/wcm/connect/yorkpublic/0983fe24-54cc-4931-b0fe-c6706f3db3e4/ECDM_-Plan_Update_2016.

Does the climate action plan get to net zero emissions?

O Yes

No

By what year does it get to net zero emissions? (select the earliest year net zero is reached - round to the nearest answer, so for 2032 you would select 2030, also for any year before 2025 - select 2025)

- O 2025
- O 2030
- O 2035
- O 2040
- O 2045
- O 2050
- **O** 2055 (select this for 2053-2057)
- O After 2057

If it doesn't get to zero emissions, does it at least get to an 80% reduction in emissions? (ONLY answer this question if the Climate Action Plan doesn't get to Net Zero)

- Yes
- O No

By what year does it get to an 80% reduction? (select the earliest year an 80% reduction is reached, round to the nearest answer, so for 2032 you would select 2030)

- O 2025
- O 2030
- O 2035
- O 2040
- O 2045
- O 2050
- O 2055 (select this for 2053-2057)
- After 2057

Does the Climate Action Plan try to address greenhouse gases created by goods the city and its residents' use that are produced outside the city?'

- Yes
- No No
- Don't know

Is an Annual Report on progress against the Climate Action Plan published (only select Yes if it has been published sometime in the past 2 years)

- V Yes
- No
- Don't know

Please paste a website link to the Annual Report (if available)

http://www.york.ca/wps/wcm/connect/yorkpublic/0983fe24-54cc-4931-b0fe-c6706f3db3e4/ECDM_-Plan_Update_2016.pg

Has the Climate Action Plan been turned into a law (a Climate Recovery Ordinance)?

- O Yes
- No
- O Don't know

2. Renewable Energy

While typically included within a city's Greenhouse Gas Inventory, electricity generation caused 32% of US greenhouse gas emissions in 2012 (source: EPA), the largest of any area. We therefore ask about it separately.

For the report card, we use the <u>US Energy Information Administration's (US EIA) classification system</u> for determining what is renewable energy. They include the following in their renewable energy figures:

- Hydroelectric Power
- Geothermal
- Solar
- Wind
- Biomass (Includes biofuels, wood, waste)

Here is what to ask a city government official:

Of the electricity used in our city, what percent comes from renewable resources? This is for the entire city, including all the residents, businesses, and organizations in the city (and not just for city government operations). If you don't know that information, do you have an idea of how it could be found? Should we talk to a utility representative - and if so, who? Can you make an introduction?

City's Renewable Energy % - most recent year available

24% Hydro Electric, 6% Wind, <1% Biofuel, <1% Solar

What year did you use for your answer to the question just before this one? Must be 2011-2014.

- 2014
- 2013
- 2012
- 2011
- No data available

City Renewable Energy % - one year before most recent year

24% Hydro Electric, 4% Wind, <1% Biofuel, <1% Solar

Where did you get your information? If a website, please copy in the web address or a link to a file. If you spoke to someone in city government or at a utility, please include their name, title, and phone number (if you have it).

Independent Electricity Systems Operator (IESO) - Provincial electricity supplier. (http://www.ieso.ca/Pages/Power-Data/supply.aspx)

3. Waste

Reducing the amount of waste we generate reduces the amount of greenhouse gases from landfills, but also is an indirect indicator that we're reducing the amount of completely new stuff we're buying. And doing a better job at reusing and recyling reduces the amount of greenhouse gases created in the production of new stuff.

Recycling Program: Is there a curbside recycling program?

\checkmark	Yes
	No

Organics Program: Is there a curbside organics recycling program (often called composting)?

- VYes
- No

Next, you'll be gathering data on the amount of waste created, composted, and recycled. You also need to get information on city population (but that is easier to gather on your own).

Make sure Total Waste Created is the total amount of waste generated by a community, not the total waste that is disposed of at a specific landfill or group of landfills.

Unfortunately there is not one standard way of measuring waste. For our purposes, it is not really important exactly how waste is defined in a city, only that it is measured, and how it is measured is the same from year to year.

Note: In some places, garbage is burned to create energy (there are pros and cons to this). Burning garbage for energy should, if at all possible, should NOT be included in the recycling rate.

For the two most recent years where there is data, gather the following info:

What is the most recent year - we'll refer to it as This year" in the following questions?

2015

"This year" Waste: Total Waste Created (in tons) for the most recent full year where you can find data	400413	"Last year" Waste: Total Waste Created (in tons) for the year before most recent full year where you can find data	403747
Total Recycling (tons) - This year	103769	Total Recycling (tons) - Last year	104836
Total Composting (tons) - This year	155385	Total Composting (tons) - Last year	162213
"This year" Population	1166000	"Last year" Population	1145000

Where did you get waste data from? Please include a link to the information.'

http://www.york.ca/wps/wcm/connect/yorkpublic/26b55afe-fad3-4b48-8377-745f122aad8f/2015_Diversion_Report_Acc_WEB_F INAL.pdf?MOD=AJPERES

4. Carbon removed from atmosphere

Removing greenhouse gases from the atmosphere will reduce the impacts of climate change. Carbon dioxide, the most prevalent greenhouse gas, can be removed from the atmosphere and stored in trees, forests, plants, and soil, mostly through the photosynthesis process.

Carbon dioxide is made up of carbon and oxygen. At a high level, with photosynthesis, the carbon is stored while the oxygen is released to the air (and we then breathe it!).

Most programs that would qualify as removing carbon from the atmosphere probably aren't labeled as carbon removal programs. Look for programs that do one or more of the following:

- · Encourage tree planting
- · Manage forests or the number of trees in a city
- Increase the amount of green space in a city (green spaces are areas of grass, trees, or other vegetation set apart for recreational or aesthetic purposes in an urban environment.)
- Protect or restore wetlands
- Protect or restore grasslands or prairies
- While you're less likely to find this, in a community with farmland, there are ways of encouraging carbon storage in the soil with certain farming and livestock management practices.

Is there a program that results in the removal of carbon from the atmosphere?

Yes

V No

Provide a link to information about the program online:

http://www.york.ca/wps/portal/yorkhome/yorkregion/yr/plansreportsandstrategies/greeningstrategy/greeningstrategy/!ut/

Does the program have metrics to measure success?

7	Yes
V	100

No

Do the metrics aim to increase the amount of carbon storage capacity, keep the amount the same, wind up in a reduction of carbon storage capacity, or are they not related to carbon storage capacity?

- Increase carbon storage capacity
- Keep carbon storage capacity the same
- Less carbon storage capacity
- Not related to carbon storage capacity

Note - for the preceding question - more trees or more wetlands would be a metric associated with increased carbon storage capacity, even if the actual carbon storage capacity is not calculated. So it is possible to answer the previous question as "Increase..." and the following question as "No."

Do the metrics include measurements of actual carbon or carbon dioxide storage capacity?

Yes

V No

Were the program metrics (whatever they are) met in the most recent year?

Yes Yes

No

5. Youth involvement

Is there a Youth Council or some other youth body, formally set up by the city, that is involved in developing climate related actions and policies? Or are there at least two youth representatives on such a group? To answer the question yes, it must not be a temporary body, and must include some youth under the age of 18.

Yes

No No

Please provide the name of the group and a link (if applicable)

WE, THE YOUTH OF York Ontario

endorse this Climate Report Card & call for immediate action to protect our future from the Climate Crisis.

SCHOOL OR GROUP NAME:

York

CLIMATE REPORT CARD

ZERO EMISSIONS PLAN

Rapidly reducing greenhouse gas emissions is the most important thing we can do to address the climate crisis.

RENEWABLE ENERGY

D-

C-

Electricity generation caused 32% of US greenhouse gas emissions in 2012 (source: EPA), the largest of any source.

WASTE

Reducing the amount of waste we generate and recycling more of it reduces the amount of greenhouse gases from landfills. Waste reduction is also an indirect indicator that we're reducing the amount of completely new stuff we're buying. Production of new stuff can generate a lot of greenhouse gases.

CARBON REMOVAL

Α

С

A-

Removing greenhouse gases from the atmosphere will reduce the impacts of climate change.

YOUTH INVOLVEMEMT

None

The youngest generation will be most impacted by the climate crisis and should be involved when policies are being put in place. A city gets a half grade increase if they have youth involved in advising on or developing climate related policies

OVERALL GRADE

RATIONALE FOR GRADES

(see the Detailed Report for specifics)

ZERO EMISSIONS PLAN

50% Weighting

York has done a Climate Action plan and is aiming for an 80% reduction in emissions by After 2057.

RENEWABLE ENERGY

20% Weighting

York knows the percent of its electricity that comes from renewable sources, which is great as many cities do not. York received 32% of its energy from renewable sources in 2014. This is below the Canadian average. York's renewable energy percentage changed by 2 percentage point(s) from 2013 to 2014.This increased the grade 1/3 level.

WASTE

20% Weighting

Waste created per person in York is decreasing which results in a better grade. The portion of York's waste that is being recycled or composted is decreasing which results in a worse grade.

CARBON REMOVAL

10% Weighting

York has a program that will contribute to removing carbon from the atmosphere. Therefore the grade starts at a C.

YOUTH INVOLVEMEMT

Possible +1/2 grade

York does not have youth formally involved in the process of creating and executing climate related policies and actions:

IMATTER

York Ontario Detail Report

1 Report Card Background

Working from <u>the largest contributors to greenhouse gas emissions</u> in the United States, iMatter developed a Report Card based on the areas a city can impact, and data that is generally publicly available. An A-F grading system evaluates a city's action (or inaction) to reduce greenhouse gas emissions to levels needed to end the climate crisis.

Actions taken to improve Report Card grades should focus a city on the right things and at the right levels to make meaningful progress on the climate crisis.

And because youth will have to deal with the effects of the climate crisis more than older generations, youth opinion matters. Youth should be involved when policies are being put in place, both so they have a voice, and so they can participate in local solutions. Youth can be partners with local government in creating the will for community change.

1.1 Basis for Report Card

Report Card grades are based on real data, the presence of programs with appropriate goals, and concrete actions. To determine appropriate goals, the science from preeminent climate scientist, Dr. Jim Hansen, was used.

Dr. Hansen, formerly of NASA, led a team that wrote a paper at the end of 2013, which gives a prescription for avoiding the worst consequences of climate change. His team makes the point that we need to keep temperatures roughly within the range of temperatures that led to the rise of human civilization. To do this required a reduction in global emissions of 6% per year starting immediately (meaning 2014/2015) and that we simultaneously take carbon out of the atmosphere with things like reforestation and better soil management. This recipe guides the Report Card grading system.

You can find <u>Dr. Hansen's paper here,</u> and a non-technical summary of it <u>here</u>.

1.2 Advisors

In addition to using the leading climate science, some of the most knowledgeable people and organizations on community climate change initiatives have been consulted to develop the Report Card. The following is our list of Advisors.

- David Allaway, Policy and Program Analyst, Oregon Department of Environmental Quality
- Brian Holland, Director of Climate Programs, ICLEI Local Governments for Sustainability USA

- Paul Kroening, Supervising Environmentalist, Waste Reduction and Recycling Unit, Hennepin County, MN
- Hunter Lovins, President, Natural Capitalism Solutions
- Matt McRae, Climate and Energy Analyst, City of Eugene, Oregon
- Eli Yewdall, Senior Program Officer, ICLEI-Local Governments for Sustainability USA
- Martha Campbell, Sr. Associate Communities, Rocky Mountain Institute
- Kaitlyn Bunker, Ph.D., Associate, Rocky Mountain Institute
- Ryan Griffin, Managing Consultant, See the Forest, LLC

The Report Card has also already been endorsed by the following organizations to encourage its use by U.S. communities.

- Project Drawdown
- Natural Capitalism Solutions
- <u>Moms Clean Air Force</u>
- Green Schools

2 Overall Grade for York = C

There are five sections of the report card that are combined into an overall grade. The Report Card itself describes why each of these sections is important. At a high level, for each section, here is what is rewarded:

- Zero Emissions Climate Action Plan: When the city's Climate Action Plan gets to net zero human emissions (by 2040 is an A, 2050 a C).
- Renewable Energy: When the percent of renewables used to generate a city's electricity is more than the national average, and the percentage is rising.
- Waste: When the amount of waste per person is decreasing and the percent of that waste that is recycled or composted is increasing.
- Carbon Removal: When there is some kind of a program that will result in more carbon being removed from the atmosphere.
- Youth Involvement: A bonus area that rewards a city 1/2 grade for having youth involved in advising on or setting climate change related policies and plans.

The sections are combined into an overall grade. Weightings are based on the U.S. averages for the impact of each area on a typical community's greenhouse gas footprint.

Weighting
50%
20%
20%
10%
Possible plus 1/2 grade

Grade weightings

Note: The "Carbon Removal" grade is slightly underweighted because much of the impact will likely come from areas that may be outside typical city boundaries (e.g., national forests, croplands, etc.)

Detail on grade calculations is shown in each grade description section. You can also find a <u>generic description here</u>.

3 Zero Emissions Plan: C

3.1 Base Grade Rationale for York

To determine the Zero Emissions Plan grade, a base grade is determined. Then modifiers are applied. This section gives the rationale for York's base grade for the Zero Emissions Plan.

Rapidly reducing emissions is the most important thing we can do to address the climate crisis, so a Climate Action Plan that gets to net zero emissions is the most heavily weighted grade in the Report Card.

Zero emissions, or at least net zero emissions is the goal. This means completely cutting a city's carbon pollution and greenhouse gas emissions. Studies have shown (here's one) that it is doable. By saying "net zero," it leaves a bit of practical wiggle room for some continued but drastically reduced emissions, as long as they're balanced out by natural factors that remove carbon pollution from the atmosphere (the Carbon Removal part of the Report Card), or possibly by purchasing a small amount of carbon offsets.

A Climate Action Plan typically starts with understanding how much greenhouse gas emissions are created by a community. Figuring out how much greenhouse gases are created is called a Greenhouse Gas Inventory (you may also see it referred to as a greenhouse gas baseline). As it's the first step in creating a Climate Action Plan, the Report Card gives some credit for cities that have done a greenhouse gas inventory, even if they have not done a Climate Action Plan.

York has done a Climate Action plan and is aiming for an 80% reduction in emissions by After 2057.

It's good that York has an 80% emissions reduction goal. But with this timeframe the base grade is a D, because the per year emissions reduction is less than 6%. The grade could be raised if York is more aggressive about when it aims to reach an 80% reduction or if the goal is changed to Net Zero emissions.

Climate Action Plan information entered:

Link to Greenhouse Gas Inventory: http://www.york.ca/wps/portal/yorkhome/yorkregion/yr/plansreportsandstrate gies/energyreporting/regionalenergyreporting/!ut/p/a1/rVTLboJAFP2WLIISubzH.

3.2 Base Grade Algorithm

This section describes the underlying algorithm for how the base grade is calculated for a city.

- 1. F, Emissions are unknown, no inventory has been conducted
- 2. D-, Emissions are known (or there is a Greenhouse Gas Inventory in process), no Climate Action Plan to reduce emissions exists
- 3. D-, Emissions are unknown and no inventory has been conducted, but there is a Climate Action Plan in place
- 4. D, Emissions are known and an Action Plan to reduce emissions exists
- 5. Grades above D are based on when the plan has the community getting to either net zero greenhouse gas emissions or an 80% reduction in greenhouse gas emissions:
 - Net Zero emissions grading scale
 - 2025: A+ (before 2028)
 - 2030: A+, (after 2027 and before 2033)
 - 2035: A+, (after 2032 and before 2038)
 - 2040: A, (after 2037 and before 2043)
 - 2045: B, (after 2042 and before 2048)
 - 2050: C (after 2047 and before 2053)
 - 2055: C- (after 2052 and before 2058)
 - 80% reduction grading scale
 - 2025: A+ (before 2028)
 - 2030: A, (after 2027 and before 2033)
 - 2035: B, (after 2032 and before 2038)
 - 2040: C, (after 2037 and before 2043)
 - 2045: D+, (after 2042 and before 2048)
 - 2050: D (after 2047 and before 2053)
 - 2055: D (after 2052 and before 2058)
- 6. Relation to Dr. Hansen's paper (see above)
 - As 6% is the average of what is needed, it is viewed as an average grade and set as a C.
 - Net Zero
 - Getting to net zero by 2050 is about a 6% per year reduction and is a C grade.

- Net zero by 2045 is close to 8% per year and is a B.
- Net zero by 2040 is about 9% per year and is an A. Sooner than 2040 is an A+.
- The concept of Net Zero allows for some small level of greenhouse gas emissions that are offset by other activities that remove carbon from the atmosphere. Therefore, for grade calculation purposes, Net Zero is assumed to be a 90% reduction in greenhouse gas emissions, with the remaining 10% offset by some kind carbon removal program.
- o 80% Reduction
 - By 2045 is about a 5 1/2% per year reduction and is a D+.
 - By 2040 is about a 6% per year reduction and is a C grade.
 - By 2035 is about 8% per year and is a B.
 - By 2030 is about 10-11% per year and is an A. Sooner than 2030 is an A+.
 - It is slightly harder to get a higher grade with an 80% reduction than with a goal of Net Zero.
- Given that the U.S. is the largest cumulative emitter of greenhouse gases (about 25% of the total), and as the US is the largest economy in the world, the grading system encourages city-level emissions reduction leadership, to get higher grades.

3.3 Grade modifiers

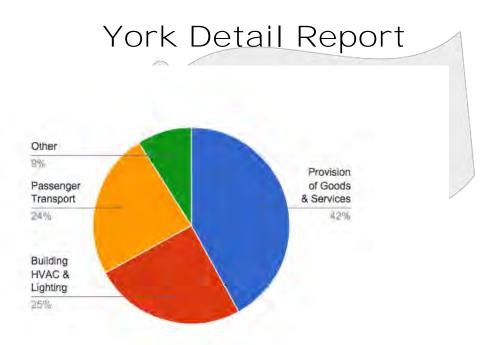

The following are all items that can modify the base grade.

3.3.1 Goods produced outside York

York's grade could be increased by 1/3 level if the Climate Action Plan would try to take into account goods produced outside of York. Most inventories of greenhouse gas emissions count only emissions generated from sources inside a community. But by purchasing goods and services, a community's citizens contribute to emissions around the world, in the places where those goods or services are produced.

Calculating emissions from goods and services produced outside the community is difficult and the approaches for doing so are newer and require more estimation. But it is good for a community and its citizens to be thinking about these emissions as well. Therefore a city's grade is raised by 1/3 level if this is included in their Climate Action Plan.

This is important, because in 2006 the U.S. Environmental Protection Agency calculated that 42% of the greenhouse gas emissions in the United States come from the provision of food or goods (see chart below). And in most cities, a large portion of the food and goods come from outside the city.

Also, 90% or more of the greenhouse gas impact of food and products happens before they are purchased. Recycling and waste management alone will not solve this problem. We must think creatively about what we buy and eat and how we can positively influence others.

The good news is that technological and cultural innovations are already positioning us for reduced consumption in a still thriving economy. "The Sharing Economy", as has been coined, could greatly reduce unnecessary personal ownership. Technology has enabled peer-to-peer connections in everything from sharing a car or a bike to seldom used tools. The National League of Cities recently published a <u>report on how city</u> <u>government can embrace and foster the sharing economy</u>.

3.3.2 Annual Report on Climate Action Plan

York has published an Annual Progress Report on its Climate Action Plan in the past 2 years, so the grade is increased by 1/3 level. While creating an annual report is no small task, the benefits can be monumental, so a city's grade is increased 1/3 level if it does one. The first of these benefits is that the annual report is a clear and consistent internal accountability mechanism. It is not about only highlighting accomplishments, but also illustrating where things didn't go as planned or opportunities still exist to improve. This level of transparency may not come easy, but many cities have been successful at creating annual reports and using them as a vehicle to engage their populations environmentally.

For example, <u>the Annual Report on the San Ramon, CA, Climate Action Plan</u>, covered everything from overall emissions reductions to new development plans, to land use and transportation strategies.

Link to York's Annual Report:

http://www.york.ca/wps/wcm/connect/yorkpublic/0983fe24-54cc-4931-b0fec6706f3db3e4/ECDM_-Plan_Update_2016.pdf?MOD=AJPERES

3.3.3 Climate Recovery Bylaws

York's grade could be increased by 1/3 level if the Climate Action Plan is turned into city bylaws.

Turning a climate action plan into city bylaws shows a city's commitment to protecting the future of its youth, so its grade is increased by 1/3 level when such bylaws are passed. Eugene, Oregon is a U.S. example of a place where something like this has happened (in the U.S. city bylaws are referred to as ordinances).

Here is the <u>press release</u> from iMatter partner Our Children's Trust on the Eugene ordinance.

Here is Eugene's ordinance.

3.4 Sample Climate Action Plans

There's plenty of help available for a city that wants to do an inventory. <u>ICLEI</u> is a global network of local governments dedicated to sustainability, resilience and climate action, with more than 1000 cities, towns, and counties around the globe. It has <u>ClearPath</u>, a web-based software solution available to communities of all sizes for the purpose of performing greenhouse gas inventories, forecasts and creating climate action plans. It is being used by hundreds of cities in the US today and is free to local governments.

Many cities around the U.S. have Climate Action Plans. Here are some examples:

- Eugene, OR note that Appendix 7 of the plan is a Greenhouse Gas Inventory.
- Minneapolis, MN Greenhouse gas inventory
- Minneapolis, MN <u>Climate Action Plan</u>
- Burlington, VT <u>Climate Action Plan</u>
- <u>The EPA website</u> has links to many greenhouse gas inventories and climate action plans.
- In <u>the Carbonn database</u>, affiliated with ICLEI, many cities report the targets for their Climate Action Plans, and sometimes their progress.
- The New York State Department of Environmental Conservation has an excellent set of tools and case studies on developing a climate action plan.

<u>16 communities were recently recognized</u> by the US White House as Climate Action Champions for leadership on climate change. One of the 16, Montpelier, VT, has launched Net Zero Montpelier in an effort to become the first carbon neutral capital city in the US by 2030.

Measuring-Up-2015, a report by ICLEI and the World Wildlife Federation, explores Climate Action plans in 4 of the 34 US cities who have recently pledged to reduce emissions by 80% by 2050. <u>Here you can find case studies</u> for Atlanta, Cincinnati, Minneapolis and Portland.

4 Renewable Energy: D-

While typically included within a city's Climate Action Plan, electricity generation causes a large portion of Canada's greenhouse gas footprint and is included as a separate grading item. Also, it is likely that a successful transition to zero emissions will require electricity becoming renewable reasonably rapidly, with things like heating and transportation converting to emissions-free electricity over time.

4.1 Renewable Base Grade

A city's percentage of electricity that comes from renewable sources is compared to the national average to get a base grade.

York received 32% of its energy from renewable sources in 2014 and 30% in 2013. In 2014 this differs from the national average by -30.8 percentage point(s). The grade is as follows:

- D-, 5% or more below the national average (includes 5% below)
- D, 5%-2% below the national average (includes 2% below)
- C, 2% below to 3% over the national average (includes 3% above)
- B, 3% to 7% above the national average
- A, 7% or more above the national average (includes 7% above)

4.2 Renewable Grade Modifier

York's renewable energy percentage changed by 2 percentage point(s) from 2013 to 2014. This increased the grade 1/3 level.

This is the algorithm used to calculate the modifier:

If a city's percentage increases by at least 0.5% year over year, the grade is increased 1/3 level, if it decreases by 0.5% or more year over year, the grade is decreased 1/3 level. If a city's percentage increases more than 2% year over year, it moves up a whole grade, unless it is already at A, in which case it moves up to A+.

4.3 Renewable Energy Definition

Renewable energy is generally defined as energy that comes from resources that are naturally replenished on a human timescale* such as sunlight, wind, rain, tides, waves and geothermal heat. Another way of thinking about it is that renewable resources are not depleted though their use. For the Report Card, we use the <u>US Energy Information</u> <u>Administration's (US EIA) classification system</u> for defining what is renewable energy. They include the following in their renewable energy figures:

- Hydroelectric Power
- Geothermal
- Solar

- Wind
- Biomass (includes biofuels, wood, waste)

The source of national renewable data for Canada comes from the <u>International</u> <u>Energy Agency</u>. Note that 2015 data is an extrapolation from prior years.

* - Note that on very long timescales (millions and millions of years, fossil fuels are technically replenishable. But not in any way that is useful to humanity.

4.4 Renewable Energy Data

Renewable energy data for York came from: Independent Electricity Systems Operator (IESO) - Provincial electricity supplier. (http://www.ieso.ca/Pages/Power-Data/supply.aspx)

National renewable percentages for reference.

2015: 63.8 2013: 63 2011: 62.3 2014: 62.8 2012: 62.7

4.5 More Renewable Energy Information

Greensburg, KS has recently <u>achieved 100% renewable energy</u> as part of their comprehensive sustainability plan and after rebuilding from an EF-5 Tornado which leveled 90% of the city in May 2007. The success in Greensburg, a small farming town in a conservative state demonstrates that renewable generation can come to any community who has the will or the need to make a change.

5 Waste: A-

Reducing the amount of waste we generate and recycling more of it reduces the amount of greenhouse gases emitted from landfills.

Waste reduction is also an indirect indicator that we're reducing the amount of completely new stuff we're buying. Buying lots of new stuff can significantly increase the greenhouse gases generated in the production of that stuff. This is often referred to as "Materials" or "Materials and Waste."

Reduction of waste has three main impacts on greenhouse gases.

- 1. Reduced amounts of waste in a landfill, especially food waste, reduce the amount of greenhouse gases (methane) given off by the landfill (according to the EPA, waste in landfills generates 2% of our greenhouse gas emissions in the U.S.).
- 2. The production and transport of the food and products (materials) we buy is estimated to cause 42% of U.S. greenhouse gas emissions (see "Background note on greenhouse gas emissions" below). Less overall waste created likely would mean we are buying less stuff that causes greenhouse gases when it is produced and delivered to the market.

3. More recycling typically reduces greenhouse gases, because it generally requires a lot less greenhouse gases to recycle materials than to create new materials. The EPA has estimated that moving to 100% recycling would result in a decrease in our national greenhouse gas emissions of 6%.

There are two main factors to the Waste grade:

- 1. Waste Created per person. Waste created or generated equals the waste disposed (in a landfill or burned) plus the waste recovered (recycled or composted). Higher grades are received the more this is reduced.
- Recovery rate: This is the percent of the total waste created that is either recycled or composted. It is calculated by dividing the total weight of materials recycled and composted by the total amount of waste generated in a year. Higher grades are received the more this is increased.

Here is the data calculated for York:

- Waste Created per person (tons) in 2015: 0.34341
- Waste Created per person (tons) in 2014: 0.35262
- Change in Waste Created per person from 2014 to 2015: -2.61188%
- Recovery rate in 2015: 64.7217%
- Recovery rate in 2014: 66.1427%
- Recovery rate change from 2014 to 2015: -1.421 percentage points

Waste grades are calculated using the following table:

	recovery rate to	12% is a 2% incre	ase.) But when 5	se in the rate (e.g. g 0% overall recovery can receive is colum	rate has been
Waste Created per person			C.	1-3% increase	More than 3% increase
Grading is based on the annual percent increase or decrease in	1% or more	0-1%	0-1%	or	or
the weight of waste per person	decrease	decrease	increase	Greater than 50% RR	Greater than 70% RR
2% or more increase	F	D-	D	C-	С
0-2% increase (includes 0)	D-	D	C-	С	В-
0-2.5% decrease	D	C-	C	B-	В
2.5-5% decrease	C-	С	B-	В	A-
5% or more decrease	С	B-	В	A-	А

score is increased 1/3 level (i.e. A- to A, A to A+)

York has a curbside recycling program, which is good. If it did not, then grades would be reduced by at least 1/3 level. York has a curbside organics (composting) program so the grade from the table is increased by 1/3 level.

Waste related data entered in the Report Card tool used to calculate grades:

Total waste (tons) in 2015: 400413 Total waste (tons) in 2014: 403747 Population in 2015: 1166000 Population in 2014: 1145000 Recycling tons in 2015: 103769 Recycling tons in 2014: 104836 Composting tons in 2015: 155385 Composting tons in 2014: 162213 Waste data came from: http://www.york.ca/wps/wcm/connect/yorkpublic/26b55afe-fad3-4b48-8377-745f122aad8f/2015_Diversion_Report_Acc_WEB_FINAL.pdf?MOD=AJPERES

5.1 What some cities are doing on Waste

More and more cities and towns are adopting aggressive zero waste initiatives.

- Here are <u>10 major US cities</u> with zero waste goals
- Info about SF, NY, and some international cities with zero waste goals.
- Small cities solve big problems a good USA Today article.

6 Carbon Removal: A

Removing greenhouse gases from the atmosphere will reduce the impacts of climate change. Carbon dioxide, the most prevalent greenhouse gas, can be removed from the atmosphere and stored in trees, forests, plants, and soil, mostly through photosynthesis - the process by which carbon is stored in plants and oxygen is released into the atmosphere.

York has a program that will contribute to removing carbon from the atmosphere. Therefore the grade starts at a C. There appear to be metrics for the program. And the metrics, if met, would result in an increase in carbon storage capacity, even if the metrics are not specifically carbon related (for example – the biomass of city trees). Therefore the grade has been increased one whole level. York's grade could be increased by 1/3 level if carbon storage capacity was included in the program's metrics. York's grade has been increased by one whole level because program metrics were met in the most recent year.

Program used to create this grade:

http://www.york.ca/wps/portal/yorkhome/yorkregion/yr/plansreportsandstrategies/gr eeningstrategy/greeningstrategy/!ut/p/a1/vZRRb4IwFIV_jY9NCOUpjx1ZFJz44JIBL6Zg wW5SsHRm7Nevbj7NOOfSrG_3NPnuPTm5F-

67UyA7hqES5q44vpLRCyamF6kQnTc8KZ0jUNwQ0Q749V06yTBLCCIDzuDt-E3eGBfgA0ypSf/dl5/d5/L2dBISEvZ0FBIS9nQSEh/#.WH09P9LR-Uk

6.1 Trees for carbon removal (sequestration)

Urban forestry is a popular method of carbon sequestration within city limits. Maintaining a healthy tree canopy has myriad benefits in addition to reducing atmospheric concentrations of CO2 and positively impacting climate change.

There are some terrific free tools available to cities.

- <u>iTree, peer-reviewed software</u> created by the USDA Forest Service, provides urban forestry analysis and benefits assessment tools through a combination of tree inventory and use of satellite analysis. iTree provides a way to regularly count trees and concretely assess the benefits they provide.
- <u>EarthDefine</u> is building the largest collection of high-resolution land cover information for the contiguous United States. This dataset currently covers over 233 million acres and is continuously expanding.

In St. Louis Park, MN, using the above two tools, the city forestry department uses a combination of a physical street tree inventory, biomass from LIDAR satellite images; and a Geographic Information System (GIS) Asset Management database for its trees:

While the number of trees important, it is their overall biomass that largely determines their carbon removal capabilities. Policies could be put in place that set targets for biomass with language on carbon removal. They could also include language to preserve trees in parks and redevelopment zones, and implement a more robust replanting policy.

Atlanta, like many cities, has a formal <u>policy requiring a permit for tree removal</u> on private property, and ensuring that replanting happens.

Burlington, VT has a policy for the city to plant 588 trees per year. See pages 18 and 23 of the <u>Burlington Climate Action Plan</u> for more information, including a great description on the many benefits of effectively managing trees.

6.2 Soil for carbon removal (sequestration)

Here is <u>a great article</u> by Judith Schwartz, author or the book *Cows Save the Planet* and Other Improbable Ways of Restoring Soil to Heal the Earth that describes how better managing soil can play a significant role in addressing the climate crisis.

7 Youth Involvement: None

York does not have youth formally involved in advising on, or helping to develop climate change related policies or plans. If youth are involved, then York's grade would be increased by ½ level.

8 Other resources for cities

Note that all materials linked to are either publicly available and/or have been provided with the consent of the creating organization.

- <u>Rocky Mountain Institute</u> (RMI) has an excellent new <u>Community Resource</u> <u>Guide</u> that provides a blueprint to launch a community energy transformation. Additional resources from RMI include:
 - A <u>strategy presentation</u> supporting the climate action plan of Fort Collins, CO.
 - A spreadsheet of <u>specific tactics</u> for Fort Collins
 - This page has links to the <u>full set of community resources</u> available from Rocky Mountain Institute.
- <u>Redstone Strategy Group</u> is a leading advisor to private foundations and nonprofits around the world, and created <u>this excellent report</u> for <u>Menlo Spark</u>, an organization looking to lead Menlo Park, CA, to climate neutrality by 2025.
- <u>Natural Capitalism Solutions</u> created a <u>Climate Protection Manual for Cities</u> that takes cities through the steps needed to conduct a greenhouse gas inventory, create a climate action plan, and measure results.

Climate Inheritance Resolution

A Resolution expressing the commitment of the York Regional Council to protect the children and grandchildren of this community from the risks of climate destruction.

WHEREAS, 195 countries, including Canada and every country that is a member of the United Nations, reached an agreement in Paris, France on December 12, 2015, that recognizes the risk to our children's and grandchildren's future from climate change;

WHEREAS, the greatest burden resulting from an inadequate response to the climate crisis will be carried by the youngest generation, and all who follow;

WHEREAS, the risks from an inadequate response are potentially devastating, and include economic and environmental disruptions many of which are already being felt such as more severe storms, longer and hotter heat waves, worsening flood and drought cycles, growing invasive species and insect problems, accelerated species extinction rates, rising sea levels, increased wildfires, and a dramatic increase in refugees from climate impacted lands;

WHEREAS, leading climate scientists¹ have indicated that further delay in significantly reducing greenhouse gas emissions will rapidly push humanity past the point where disastrous consequences can be avoided;

WHEREAS, numerous governmental and non-governmental bodies across the nation and the world have already adopted climate action plans to immediately and rapidly reduce greenhouse gas emissions while also stopping them entirely within 25 years;

WHEREAS, youth of York Region have brought this Council a Youth Climate Report Card highlighting the gap between what we are doing today and actions that would be necessary to protect their future;

WHEREAS, youth of York Region have indicated a willingness to work with this Council on such actions, we, therefore, declare it:

RESOLVED, that York Regional Council commits to working constructively, using ingenuity, innovation, and courageous determination to complete or update a York Climate Action Plan for consideration that significantly reduces York's net greenhouse gas emissions to zero by the year 2040 and that would protect our community's children and grandchildren from the risk of climate destruction.

BE IT FURTHER RESOLVED, that the York Regional Council commits to start a York Youth Advisory Committee within 90 days as a mechanism for the ongoing inclusion of young people in the process of creating and executing climate related policies and actions.
