4.1 Street Design Guidelines

Guidelines outline best practices for the design of boulevard and roadway elements

This section's design guidelines outline best practices for boulevard and roadway elements found on Regional roads. Both are critical to creating a cohesive street design that functions effectively within its context. Boulevard elements are located between the curb and the building frontage of a street. Roadway elements are found between the two curbs.

This section also outlines guidelines for intersections, transitions and general street elements.

Using This Section
The location of each element within the cross-section and the typologies to which it can apply are identified through shading and colours in the Typology and Cross-Section Keys. Examples are shown below.

Note, this document references many resources for further information. These resources may be updated from time to time and professional judgment should be applied should discrepancies arise between *Designing Great Streets* and its resources.

Typology Key: Element applies to bolded typologies and does not apply to light grey typologies.

City Centre Street	Connector
Avenue	Rural Road
Main Street	Rural Hamlet Road

Cross-Section Key: Boulevard elements are identified with orange and roadway elements are identified with green.
