

Personal Protective Equipment

Personal Protective Equipment (PPE) should be worn to prevent the spread of germs. By protecting your skin and face (mouth, eyes and nose) with PPE you minimize your chance of getting germs into your body.

Put on Personal Protective Equipment in this order:

<p>1</p> <p>Perform Hand Hygiene</p>	<p>2</p> <p>Gown</p>	<p>3</p> <p>Mask</p>	<p>4</p> <p>Goggles</p>	<p>5</p> <p>Gloves</p>
				

Take off Personal Protective Equipment in this order:

<p>1</p> <p>Gloves</p>	<p>2</p> <p>Gown</p>	<p>3</p> <p>Perform Hand Hygiene</p>	<p>4</p> <p>Goggles</p>	<p>5</p> <p>Mask</p>	<p>6</p> <p>Perform Hand Hygiene</p>
					
<p>Remove using glove-to-glove/skin-to-skin method and discard</p>	<p>Peel off away from body and turn inside out, roll into ball and put in garbage</p>	<p>Use hand sanitizer or wash hands with soap and water</p>	<p>Hold goggles at the sides, pull away from face and set aside or put in garbage</p>	<p>Hold mask by straps, remove from face and put in garbage</p>	<p>Use hand sanitizer or wash hands with soap and water</p>

If PPE is not removed carefully, germs can spread to skin or face.
